It has been accepted for inclusion in Great Basin Naturalist Memoirs by an authorized administrator of BYU ScholarsArchive. For more information, please contact scholarsarchive@byu.edu.

ACKNOWLEDGMENTS

This flora project, begun at Brigham Young University in 1960, has a larger counterpart in the Intermountain Flora Project of the New York Botanical Garden. Rather than being competitive, although exclusive in personnel and organization, the projects have been mutually collaborative and beneficial. Drs. Arthur Cronquist, Noel Holmgren, Patricia Holmgren, James Reveal, and Rupert C. Barneby have aided in identification and verification of critical material, have provided information on nomenclature, have given locality data and information on new state records, allowed prior publication of nomenclatural combinations and new taxa, and have given encouragement and help at all times. Exchange specimens, both those sent and those received, have been useful to both projects. We thank them for their help.

Specimens in critical groups have been routinely sent to specialists for verification and/or identification. Groups and specialists are as follows:

Compositae	Arthur Cronquist
<i>Cirsium</i>	Gerald B. Ownbey
Boraginaceae	Larry C. Higgins
Leguminosae (general)	Duane Isely
<i>Astragalus</i> (and other critical legumes)	Rupert C. Barneby
<i>Lupinus</i>	David B. Dunn
<i>Allium</i>	Dale B. McNeal
<i>Chrysothamnus</i>	Loran Anderson
<i>Penstemon</i>	Noel Holmgren
Umbelliferae	Lincoln Constance
Various groups	John Thomas Howell
<i>Eriogonum</i>	James L. Reveal
Loasaceae	H. J. Thompson
Gramineae	Lois A. Arnow
Cruciferae	Reed C. Rollins
Hydrophyllaceae	N. Duane Atwood
Cyperaceae	Sherel Goodrich

Special thanks are hereby tendered to Drs. Dorald L. Alred and Stephen L. Wood of the Life Science Museum at Brigham Young University for their help and encouragement. Drs. Bruce Smith and Jerran Flinders gave financial assistance and allowed time for curation and collection of materials. Many people have assisted with collection and identification of plant materials. Among them are Mont Lewis, Kaye Thorne, Sherel Goodrich, Drs. Glen Moore, Joseph R. (Dick) Murdock, Bertrand F. Harrison, Walter P. Cottam, Arthur Holmgren, Bassett Maguire, Elizabeth Neese, N. Duane Atwood, L. C. Higgins, Steven L. Clark, and Richard Shaw.

Kaye Thorne is here singled out for special thanks. Her duties at the herbarium of Brigham Young University, huge by any standard, were not an obstacle to helping with the completion of the flora. She wrote two family treatments, arranged for loans, provided illustrations of new taxa discovered, and did myriads of other tasks.

Many of the early collectors and avid botanists have passed from the scene. Included are Seville Flowers, Albert Osburn Garrett, Per Axel Rydberg, Marcus Eugene Jones, Sereno Watson, and John Charles Fremont. Their contributions are here gratefully acknowledged.

The writers are especially grateful to the new generation of collectors, including Gary Baird, Merton A. (Ben) Franklin, Joel Tuhy, Betsy Neeley, and Ronald Kass. Beverly Albee is here given special thanks for the loan of distribution maps showing specimens from the herbaria of the University of Utah and Utah State University. The curators of the various herbaria are acknowledged for their help and suggestions.

Collaboration of officials of the various national parks and monuments, who so kindly granted collecting permits, is also acknowledged. The assistance of Larry Hays at Zion National Park, Jim Holland, Vic Vierra, and Ron Sutton at Glen Canyon National Recreation Area, and numerous people, including Superintendent Pete Perry of Canyonlands National Park was particularly helpful. The former superintendent of Arches, Natural Bridges, and Canyonlands, the late Bates Wilson, gave help and encouragement during the early years of fieldwork leading to this flora. Eleanor Inskip of the Canyonlands Natural History Association arranged for float trips through Cataract Canyon in collaboration with the National Park Service. Numerous federal and state agencies have collaborated in allowing and encouraging the collection of critical material. Donna House of the Navajo Heritage program aided in exploration of Navajo lands in Utah.

Thanks are given to Jody Chandler, subject matter librarian at the M. L. Bean Life Science Museum, branch library, for her search of literature for chromosome numbers and for the citation of type locality information. Kathryn Taylor Mastin read the manuscript for typographical errors and uniformity, especially of author abbreviations, and she assisted with preparation of the author list. The glossary was written by N. D. Atwood and supplemented by all other contributors. The index of scientific names was formulated initially by N. D. Atwood and S. Goodrich. Common names were extracted from the text by Wendy Jefferies.

GENERAL REFERENCES

- References of a specific nature accompany many of the families and genera in the taxonomic treatment. Many other references have been used in a general way, and their use has contributed to the value of the flora. These general references, many not cited in the text directly, are presented here.
