The Mexican Bean Beetle Taken at Provo, Utah

Specimens of the Mexican Bean Beetle, *Epilachna corrupta* Muls., were collected on the Brigham Young University campus, by a student of entomology, Mr. George Cannon, in October, 1939. This extends the distribution of this species in Utah since it was last reported by this writer in the *Pan-Pacific Entomologist*, Vol. V, pp. 183-86, 1929.—V. M. T.
