Spanish Additions to the Cowboy Lexicon from 1850 to the Present

Heather A. Robles

Before the development of the windmill, barbed wire, and the modern machinery now used in the cattle industry, "cowboys" inhabited Texas and other western states and herded cattle all year. The work of the cowboy was unlike that of any other profession. For minimal wages, he worked seven days a week and was on call twenty-four hours a day. He regarded his job satisfaction as compensation for the low pay, and took pride in his skill at various herding and roping techniques. The first and, for a long time, best cowboys came from Mexico, since the cattle market in Mexico preceded the one in the United States. The first Anglo cowboys were young men from the East whose interest in the unknown West led them to their new career. They learned the trade from the Mexican vaqueros and, as a result, came to use Spanish vocabulary for many of their surroundings, techniques, and tools.

This paper will briefly discuss the Spanish terms found in cowboy English from the late 1800s to the present. The terms described are found in authentic literature written by cowboys describing the many facets of their profession. Included in the fiction and non-fiction sources are biographies, autobiographies, diaries, a book on campfire stories, novels, and books written by cowboys describing the "colorful" nature of their language. The terms are cross-referenced with definitions from western dictionaries, etymological dictionaries, and various Spanish regional dictionaries. In addition to identifying Spanish loanwords in the American cowboy lexicon, this paper also includes an analysis of the categorial and semantic changes common to many of these terms. These changes in category and meaning indicate the degree of integration of a specific term into the English language. Some, like the term "corral," have become highly integrated into English. "Corral" is recognized by nearly all English speakers, and most do not realize that the term comes originally from Spanish. It is used not only as a noun (like the Spanish term corral), but also as a verb, meaning to force an animal into an enclosure. "Corral" is also used metaphorically, in the sense of cornering a person (not just an animal). This paper will show how similar categorical and semantic changes have occurred in many borrowed hispanicisms, indicating that they have been accepted and integrated into the English language.

Spanish Borrowings in the Cowboy Lexicon

Clothing and Other Accessories

Many of the terms from the cowboy's wardrobe are originally from Spanish. Over his durable pants he wears chaps. The origin of the word chaps is Spanish, but there is some disagreement as to whether the word descends from chaparreras or chaparejos. Chaps can be worn to the ankle or to the knee. Shorter chaps are also known as "chinks," a term whose origin is attributed by many authors to the Spanish chincaderos or chigaderos, although neither of these terms appears in modern Spanish dictionaries. Short chaps are also known as
armitas. The *Diccionario de Mejicanismos* gives the following definition for the term *armas de agua o de pelo*: "Llamábanse así dos piezas grandes de cuero de chivo, con pelo, casi cuadradas, que sujetas en la cabeza de la silla o atadas a la cintura del jinete, le cubrían pierna y pie, y le preservaban del agua. En caso necesario se tendían en el suelo para dormir sobre ellas. Las había ricamente adornadas. Hoy se han sustituido con las *chaparreras*, que no pueden prestar iguales servicios, porque no cubren el pie ni sirven para dormir" (p. 80).

According to this definition, *armas* are the predecessors of *chaparreras*. *Armitas*, then, correspond with the definition above and are a smaller variety of *armas*. Since chaps don't cover the feet, as the above definition of *armas* explains, cowboys used *tapaderos*, or "taps," which are leather coverings attached to the stirrups to protect the toes. The term derives from the Spanish *tapar*, "to cover." The cowboy's chaps and taps are often trimmed with shiny metal decorations called *conchos* or *conchas*. *Concha* is the Spanish word for "shell." Though the silver decorations have a shape similar to that of a shell, Spanish regional and general dictionaries do not provide a similar definition.

Other parts of the cowboy's wardrobe included the *poncho*, which was usually a blanket with a hole for the head. This term could also describe a waterproof shield, but in most regions "slicker" or even "fish" were more common. The cowboy's hat is often called a *sombrero*. The word is originally Spanish, and it refers to any kind of hat. To the cowboy, the *sombrero* is usually a hat with a wide brim. Another style of hat is the "ten-gallon hat." Contrary to popular belief, the name does not refer to its capacity, but derives from the Spanish *galón*, a braided decoration. American cowboys, misinterpreting the meaning of *galón*, added the number "five" or "ten" to the name of the hat to describe its large size. Some cowboy hats had a *barboquejo*, or chin strap.

Another piece of the wardrobe was the *bandana*, which served a multitude of uses for the cowboy. In *The Time it Never Rained*, Elmer Kelton makes mention of the *huaraches* worn by Mexican migrant workers (p. 38). Many cowboys carried a *morral*, a pouch or sack, to carry their supplies.

### The Saddle

Since the cowboy did most of his work on horseback, (many claimed they were uncomfortable when not in the saddle), the saddle and its accessories became a cowboy's most important equipment. Even though many cowboys ride horses belonging to the ranch that employs them, each has his own saddle. The saddle is secured on the horse by one or more "cinches." "Cinch" comes from the Spanish cincha. In English it has come to be used as a verb, as well, and has also adapted a metaphorical meaning, as illustrated by the popular Western author Louis L'Amour: "Hopalong rubbed his jaw, his blue eyes twinkling. 'I reckon that last argument cinches it, Sim! I sure was figgerin' on more pie!" (p. 238). The leather strap that fastened to the cinch and held the saddle in place was called the látigo.

Saddles were often heavily decorated with silver *conchos* and stamped leather, which indicated their worth. The saddle horn is often referred to as an "apple," an "apple horn," or a "dally horn." "Apple" is a probable calque from Spanish. The *Diccionario de Mejicanismos* offers a similar definition of the word *manzana*: "cabezal o parte delantera de la
Spanish Additions to the Cowboy Lexicon

silla de montar" (p.694). Spanish also has a verb related to the noun manzana: "Manzanear. tr. Entre charros y personas de a caballo, sujetar a la manzana de la silla de la res lazada, dando vuelta corrediza a la reata en torno de ella" (p.694). The meaning of this verb is similar to the English term "to dally" (also spelled "dalley"), which Hedges defines as "to take a wrap around the saddle horn with the rope" (p.334). The term "to dally" is a hispanicism that probably derives from the command form dale vuelta. It has also been attributed to the infinitives dar la vuelta and darle vuelta. Earlier versions of the term were "dollly welter" and "dally welter" (Erickson, p. 95). The term seems to have been adopted into English shortly after the turn of the century. However, it is not found in J. Frank Dobie's A Vaquero of the Brush Country (originally published in 1929); he instead talks of giving the rope a vuelta: "After a while I'd give the rope a vuelta (a turn) around a post, and by taking up the slack when the cow ran would finally get her tied up short" (p.6). In more recent cowboy lingo, a "dally" is one turn of the rope around the horn. Some cowboys prefer this method of securing an animal after roping it; others prefer the "hard-and-fast" approach, which involves tying the rope fast to the horn before roping. Among the cowboys that prefer the daily technique, the horn is referred to as the "dally horn."

In addition to the saddle, riding equipment also includes the reins and the headstall fastened onto the horse. One very common type of headstall is the "hackamore." "Hackamore" derives from jáquima, a Spanish word of Arabic origin. The bosal or bozal is a part of the hackamore, the noseband made of rawhide or braided leather, rope, or horsehair. The mecate (usually spelled mecáte), or hair rope, serves as reins and completes the hackamore. Mecate comes originally from the Nahuatl word mecal, which the Diccionario de Mejicanismos defines as "tira larga y angosta o soga hecha de corteza vegetal" (p.711). The word's origin is not well-known among cowboys because its pronunciation has been altered and it is often spelled "McCarty."

When the cowboy rides his horse on a ranch, he always carries one or more ropes. There are a large variety of ropes that serve many different purposes, some retaining their Spanish names. A maguey rope is made of fibers of the maguey cactus and is used exclusively for "dally" roping, which means that it is never tied fast to the saddle horn when an animal is being roped. A "quirt," according to Mackey Hedges, is "a braided, rawhide riding crop or short whip" (p.336). The term has been attributed both to the Spanish word cuerda, cord, and to cuarta, horsewhip. The latter etymology seems to be more credible. The Diccionario de Mejicanismos gives the following definition for cuarta: "Látigo corto para las caballerías de silla. Es todo del cuero que llaman peal. Tiene en el cabo una asa o anillo del mismo cuero, con que se asegura a la muñeca, y en el otro extremo una pajuela o tira delgada, que es propriamente el azote" (p.319).

Ropes in general are referred to as "lariats" or "reatas" (also "riatas"). Both words derive from the Spanish word for a rope used to keep animals in a line, plus the feminine article: la reata. The term lasso, from lazo, is sometimes found, often as a verb. The ropes used for roping animals are made with a "honda" (often spelled "hondo"), a loop or eye in the end of the rope. A honda can be a loop made by tying a knot in the end of the rope, or it can be a
ring of rawhide or metal braided into the end of the rope. The loop used to catch an animal is made by passing the free end of the rope through the honda. The term does not derive from the Spanish hondo, but from hondón, an eye or eyelet. The uses of the rope include various roping techniques, many of which still use Spanish terminology.

Roping Techniques
A common roping technique is the mangana, a throw used to catch a horse. This throw is also known as "forefooting" and involves forming a loop that the horse steps into with his front feet. There are several variations on the mangana. The cowboy uses his foot to throw the loop in the mangana de pie. The mangana de cabra is used by shepherders, or pastores, to catch goats by the front feet (Dobie, p. 247). A common throw mentioned by Dobie is the pial, which is used to catch an animal by its hind feet (p.248). Watts gives "a rope" as a secondary definition for the word pial (p.243). Variations on the term pial are found in the Diccionario de Mejicanismos and Vocabulario Campesino Nacional (VCN). The DM notes that the term peal comes from the same Latin root as the word pie, and defines it as a type of rope:

"(De pes, pedis, como pie.) m. Soga, cuerda con que se laza la res, echándosela preferentemente a las patas; hecha de ordinario de fibra resistente, recia, torcida; llamada también reata o lechuguilla. Del sureste a Sur América, hecha de cuero crudo, curado con sebo, torcida y tallada" (p.820).

The DM also includes a verb form: "Pealar. tr. Forma vulgar de apealar, por echar el peal a la res, lazándola en carrera. También se dice pialar" (p.820). The (VCN) mentions the term pial, citing its use as a rope throw, a type of rope and a loop: "Lazada a la extremidad de la pata. . . Cuerda de cuero sin tejer ni torcer, que sirve para inmovilizar a la vaca cuando se ordeña. . . Lazo que atrapa las patas de una bestia" (p.84). The VCN also mentions the verb form: "PIALAR o APIALAR: Lazer de las patas a las bestias" (p.239). Hedges describes a throw similar to the pial, called the culo: "A style of throwing the rope so that it wraps around the rear of an animal and catches the hind feet from the back rather than from the side" (p.334).

The Ranch Hierarchy
The earliest cowboys were Mexicans, and they referred to themselves as vaqueros. In fact, among cowboys themselves, "cowboy" has never been a very common term. More common are "cowman" (vaquero) and "buckaroo." Buckaroo is an adaptation of the word vaquero. Caballero was also occasionally used to refer to a man on horseback. A group of cowboys or vaqueros was called an outfit or a corrida.

There are many levels in the hierarchy of a ranch. The owner of a ranch is known as the "rancher" or ranchero, the patrón, the señor, or even the Don. The owner's wife is called la patrona or la madama. The owner sometimes lives on the ranch, but often he is an absentee owner who counts on his foreman to run the ranch in his absence. Cowboys sometimes refer to a distant absentee owner as the presidente. The foreman (sometimes called the mayordomo, if he is Mexican) selects a trail boss to supervise trail drives and round-ups. The trail boss might then select a straw boss, or segundo, to assist him. Another
term for the straw boss is the *caporal*. Below the *segundo* are the *vaqueros* or cowboys, sometimes referred to as "punchers," as well as the cook, who never helps with the cattle, except in case of emergency.

At the bottom of the hierarchy is the "wrangler," or the man in charge of keeping the herd of horses and supplying each cowboy with a fresh horse whenever he needs a change of mount. The term "wrangler" existed in English as early as the sixteenth century. Henry V refers to himself as the wrangler for the throne of France in William Shakespeare's *King Henry V*:

"Tell him he hath made a match with such a wrangler that all the courts of France will be disturb'd with chases" (p.493). However, it is unlikely that early cowboys were familiar with this use of the term. It is more likely that the modern Western usage of wrangler comes from the Spanish *caballerango*, which the *Diccionario de Mejicanismos* defines as: "El mozo que en las haciendas o casas particulares cuida y ensilla los caballos" (p.162). Watts gives "wrango" and "wangler" as variations of "wrangler" (p.370). The wrangler of an outfit is usually the youngest and/or least experienced member of the crew. It is a position of little prestige, but considered to be a good starting place for young would-be cowboys. The wrangler is also called the *remudero* because he was responsible for the *remuda*, or herd of horses.

**Animals**

Some animal terms from Spanish refer to animals found only in the Southwest and Mexico. Since no English word existed, it is natural that cowboys and other newcomers to the West adopted the Spanish names. These animals include the *coyote* (originally from Nahuatl *coyotl*), the *paisano* (also "road runner"), the "javelina" (from Spanish *jabalina*-also known as the collared peccary), and the "tarantula" (a term originally from Italian).

The history of the word "buffalo" is unique. The American buffalo is more correctly referred to as the American bison. Buffalo comes from *búfalo*, which was the name the Spanish conquistadors originally assigned to the bison, which they found to be similar to the Indian buffalo. The term *búfalo* was first recorded in the Americas around 1530 when it was used by Nuñez Cabeza de Vaca to describe the bison found on the plains of Texas (Watts, p. 57). Another animal native to the Southwestern United States and Mexico is the *puma*. *Puma* is the Spanish word for the animal that in English can be referred to as *puma*, "cougar," and "mountain lion."

Cowboys also use a number of terms to refer to the stock and domestic animals that they work with. Some cattle breeds have names that come from Spanish, such as *Santa Gertrudis* cattle and "Corriente Steers." *Corriente*, a Spanish word meaning "common" or "ordinary," originally referred to steers in a generic sense. However, the term has taken on a more specific meaning. Hedges reiterates this, though he says that Corriente Steers are not exactly a breed of cattle: "Corrienties [sic] are considered a breed by some people today. In truth, they are a cross of several breeds of cattle found in Mexico and come in a variety of shapes and sizes. They are popular with team ropers because they usually have large horns compared to the size of their bodies" (p.334). Cattle in general are also referred to as *novillos*. A bull might be called a *toro*. Ramon Adams says that many old cowboys preferred to use the term *toro* in the presence
of a lady in order to avoid the more vulgar term, "bull" (1961, p. 159). A wild or unmanageable steer is called either an outlaw or a ladino. Ladino is a Spanish term meaning "learned" or "clever," and cowboys use it to describe an animal that seems to have unusual intelligence. The DM says: "se le llama asi [ladino] sobre todo al toro que habiendo estado en corral, al volver al campo no solo es otra vez salvaje, sino que tiene una especie de conocimiento del hombre y esquiva los lazos que se le ponen para cogerlo" (p. 652). Motherless calves are known as "dogies" or sanchos. The origin of "dogie" is uncertain. It is probably a hispanicism, but whether it derives from a variant of adobe or from dogal, "halter," has not been established. It has, however, been proposed that the term is not of Spanish origin at all and perhaps derives from "dough-guts," an expression used by cowboys to describe the swollen bellies of malnourished calves (Blevins, p. 114).

Another word for an orphaned calf is "leppie," or "lepe," which comes from the Spanish term lepe, which Sobarzo defines as an orphaned animal: "LEPE. adj. Dicese del animal, especialmente del becerro o del potrillo, que ha perdido la madre, sea por muerte de esta o por otra circunstancia" (p. 140).

Cowboys have an equally rich Spanish vocabulary to describe horses. A caballo is a horse in general. A "brnoc," or bronco (less common), is a horse that has not been "broken," or trained to wear a saddle and carry a rider. The DM confirms this definition: "bronco, ca. adj. Dicese entre gente del campo, del caballo no acabado de educar y reacio por lo mismo a la rienda y al manejo del jinete" (p. 152). In later cowboy literature, a brnc came to mean not just an unbroken horse, but any horse that had a difficult disposition and was hard to ride: "Through close supervision and careful culling, the rancher should be able to mount himself and his cowboys on the kind of horses he thinks are right for his type of operation. If he ends up with knotheads and broncs, he has no one to blame but himself" (Erickson, p. 71). A potro refers to a young horse, either unbroken or in the process of being broken. A "mustang" is a wild horse descended from the horses that had been stolen by Indians or those that escaped from the Spaniards during the colonization of Mexico. The word "mustang" is said to derive from the Spanish word mesteño. Dobie gives another possible etymology of the word:

It is the English corruption of mesteño or mesteña (feminine), a word already legalized in Spain when Copernicus asserted diurnal rotation of the earth. In 1273 the Spanish government authorized the mesta as an organization of sheep owners. On the long 'walks' between winter and summer ranges, many sheep were lost. They were called mesteños (belonging to the mesta). They were also called mostrencos (from mostrar, to show, exhibit). The estrayed animal had to be mostrado (shown) in public to give the owner a chance to claim it. Bienes mostrencos were, in legal terminology, goods lacking a known owner. . . Mestengo, a later form of mostrenco, is a word nearer to mustang than mesteño, and some etymologists have regarded it as the origin (Dobie, 1952, cited in Watts, p. 221).

Spanish terms are also commonly employed to refer to the color or breed of a horse. A grulla is a mouse-colored horse. A moro is
a blue-gray color. A pinto or "paint" is a two-colored horse, as if splashed with paint. A palomino is a horse with a golden color. According to Watts, the term palomino comes originally from the Spanish paloma, and makes reference to the grayish-golden color of the dove (p.237).

Spanish terms are also found in references to groupings of animals. A group of horses including one stallion and several mares of the same coloring is known as a manada or mañana. A manada can also refer to a group of mares and colts, the lead mare wearing a bell and called the "belled mare" or the caponera. The group of horses from which cowboys choose their mounts is known as a "cavvy." The term comes from caballada, which has the same meaning as the English term: "Manada de caballos o de yeguas" (DM, p. 161). Other variations on the term include "cavvieyard," "cavvie," and "cavieta." Remuda is a synonym of cavvy.

A herd of cattle is sometimes called a "rodear." This comes from the Spanish verb rodear, to encircle or round up. The term can also be used as a verb. Hedges explains this use of rodear in his glossary: "As a verb, it means to hold a herd of cattle, as in, 'We rodeared the cattle in a draw across from the dry lake.'" (p.336). A "paratha" or "parada" (also often parade, pronounced like the English "parade") is a smaller herd made up of animals separated from the rodear. Oreana pairs are an unbranded calf with his mother. A single oreana is an unbranded animal. The word (also spelled orejano or orejana) refers to animals that lacked the ear-mark or cut that identified the animal's owner.

The word "ranch" comes from the Spanish rancho. A ranch is also referred to as an hacienda. Structures on the ranch include the big house, which includes a cocina, the bunkhouse, and the "corrals." Fences on a ranch are made of wire, or alambre. In a Southwestern town, houses of poor quality are called jacaules. Buildings constructed of adobe are called, simply, "adobes." Other structures with Spanish names include the town plaza, the café, and the "rodeo arena."

Innovations

Categorical Changes

Many of the Spanish terms mentioned above were not only adopted into English, but they also suffered categorial changes. This section will briefly detail some of these changes, listing the most notable examples.

Noun to Verb

English allows for nouns to easily transform into verbs. For example, to "photograph" someone is to take a photograph of him, and to "telephone" a friend is to call him on the telephone. The Spanish language does not allow for such a smooth transition from a noun to a verb. The Spanish noun corral, for instance, can be used in English as a verb, meaning to force an animal into a corral. To spur and "quirt" a horse is to urge him on using spurs and a quirt, or short whip. The term "wrangler," from caballerango, produced the verb "wrangle" in cowboy English, meaning "to herd and drive horses" (Watts, p. 369). Another example is the verb "to stampede," from the Spanish noun estampida. "Stampede" can be a transitive verb, meaning to cause a group of cattle to bolt, or an intransitive verb, meaning to suddenly take off running.
Verb to Noun
Just as English allows for nouns to become verbs, the reverse transformation is also permissible. You can call someone on the phone, or make a phone call. Some Spanish verbs that became nouns include "dally," from dale vuelta. One turn around a saddle horn came to be known as a "dally," and a cowboy's skill at roping was a measure of how he "took his dallies" (Hedges, p. 72). A common verb in cowboy English is "savvy," meaning to know or understand. The Spanish spelling, sabe, was often found as well. The following example is found in Ramon Adams's The Old-Time Cowhand:

"When scattered schools were established, and teachers imported from the East, the range-bred boy didn't have much respect for them wisdom-bringers because they were pilgrims. To 'im anybody that didn't savvy cows was a greener that couldn't teach a settin' hen to cluck" (p.13).

As a noun, the term refers to knowledge or understanding. It can be said of a person, "There's a heap of truth in that old sayin', 'Put a cowman afoot and he don't know a thing.' Yet the sayin' itself is a compliment to his savvy of hosses and cattle" (Adams, 1961, p. 12); or of a horse: "I was ridin' a big stout chestnut horse called Bob that had lots of cow savvy and was fast on his feet" (Green, p. 227).

Another Spanish verb that is used in English as a noun was pasear. As a noun it means a stroll, but is usually used ironically and refers to a fairly large distance: "Now, immediately after coming into possession of Payaso I made, for private reasons, a considerable pasear into the Devil's River country to the south and west" (Dobie, p. 123, emphasis mine). Finally, Hedges mentions rodear, which can be a verb, meaning to encircle or round up (the origin of the modern rodeo), or a noun, meaning a large herd of cattle.

Verb or Noun to Adjective
It has already been mentioned how the Spanish verb rodear could also serve as a noun, meaning a large herd of cattle. Another noun that came from rodear was "rodeo," which is a competitive event at which cowboys show their riding and roping skills. "Cinchy" is an adjective that comes from "cinch"; it refers to a horse that is sensitive to the saddle and difficult to ride: "He saddled him in the corral, and as soon as his cinch went tight, ol' Prescot went up in the air and over on his back. 'Kinda cinchy, ain't he?' was all that Dean had to say" (Hedges, p. 259). "Bronc" is also used as an adjective, referring to the disposition of a horse: "A snubbin' post is used when you rope a bronc horse or bad cattle and need to draw them up tight in order to do something to them" (Green, p. 179).

Attributives
In English, nearly any noun can become an adjective, which allows for formations such as "mañana manner," which is found in Dobie's A Vaquero of the Brush Country: "He was deep in the joys of constructing, purely in an imaginative and mañana manner, a ten-storied marble hotel at San Antonio for the use of old time trail drivers and the cattle people of generations to come" (p. xi). English also allows for nouns to be used as adjectives, without necessarily losing their classification as nouns, as in the combinations "ice cream cone" and "basketball team." In these examples the nouns "ice cream" and "basketball" serve to
modify other nouns, "cone" and "team." Spanish allows for this type of modification very infrequently. However, some Spanish nouns, after being integrated into English could be used to modify other nouns. "Rodear" and "rodeo" came to be used in this way, as in the "rodeo circuit," "rodeo boys," and the "rodear ground" (Hedges, 207). Similarly, the noun "cinch" and the verb "dally" serve as modifiers in constructions such as "cinch leather" and "dally rubber."

Semantic Changes
This section will discuss the semantic changes that many hispanicisms underwent after their adoption into English. The metaphorical use of "corral" has already been mentioned, where it comes to mean to corner a horse or a person. In addition to adopting metaphorical uses, Spanish terms adopted into English came to be used in redundant constructions and even produced new words with new meanings. All of these semantic changes indicated that the term in question had been completely integrated into the English language and was at that point subject to all of the possible transformations of the language.

Figurative uses
The cowboy's language is full of colorful comparisons and metaphors. In fact, the cowboy's unique and picturesque style of language has been the subject of books, such as The Cowman Says it Salty by Ramon Adams and Happy Trails: A Dictionary of Western Expressions by Hendrickson. The use of hispanicisms in metaphors shows their integration into his language. The verb "to cinch" is sometimes used metaphorically, as mentioned in a previous section. A new form, "to uncinch," also has a metaphorical meaning. In the following example, Adams (1961) refers to the cowboy's flair for profanity: "When he uncinched this talent and turned 'er loose, he was a top hand at it, and had mighty few equals" (p. 24). A cavvy refers to a herd of horses, but Ramon Adams makes reference to the "cavvy of graybacks" (fleas) that a cowboy might inherit if he wasn't careful about his hygiene (p. 71). Kelton uses the verb "to wrangle" to mean to argue: "Breed was a small matter, something to josh a competitor about -- like wrangling over Fords and Chevrolets" (p. 278). A "dally" is one turn of the rope around the saddle horn to keep a roped animal in place. Adams talks of a "dally" of the tongue that keeps a cowman's temper in place: "It was the greener's ignorance that made the range man hobble his lip and put a dally on his tongue, because the first time he said somethin' 'round a tenderfoot a herd of questions came foggin' his way" (1961, p.18). A cowboy who liked to practice his quick draw was said to have the "pronto bug" (Adams, 187). One of the most colorful metaphors used by cowboys was that of the verb "to pecos": "To 'pecos' a man one shot him and rolled his body into the river -- the one river that drained an empire" (Dobie, p. 275).

Redundant Constructions
The topic of redundant forms falls under the section on categorical change, as well as under the section on semantic change. The hispanicism in such forms was generally a noun that had been converted into an adjective. As such, it became a modifier that referred to a specific variety of thing, rather than the thing itself. For example, grama is a Spanish term for grass. In the redundant formation "grama grass," however, it refers to a specific type of grass
and distinguishes it from other varieties, such as "buffalo grass" (L'Amour, p. 22). Sometimes redundant forms do not imply a change in meaning, such as "wild mustang horse" and "lariat rope" (Erickson, p. 16).

New words (derivations)
A third source of proof that a Spanish word has been integrated into English is its propensity to produce new forms. For instance, the noun "stampede" led to the transitive verb "to stampede," from which the agent noun stampeder derives: "There was always some old "stampeder" or two layin' out on the fringe lookin' for boogers" (Adams, 1961, p. 36). A "mustanger" is a man who hunts mustangs. A "semi-bronc" is a bronc that is somewhat manageable, but still fairly wild (Adams, 1961, p. 247). The verb form of "cinch" produced the adjective "cinchy" (Hedges, p.259), the verb "to uncinch" (Adams, p. 24) and the verb "recinch" (Adams, p. 248). "Locoed" derives from loco, as in "loco weed."

Conclusion
This paper has presented a detailed, but by no means exhaustive, list of Spanish terms found in cowboy English literature from the 1800s to the present. The categorical and semantic changes experienced by many of the terms have been explained. These changes indicate the degree of integration of a term into the English language. Further proof of this high level of integration is the fact that some terms have become so altered from their original Spanish form and so frequent in English that their origin is not ordinarily recognized by cowboys or other English speakers. The use of such interviews, including acceptability judgments from the interviewees, would be an excellent addition to a future study because they would lend a current viewpoint to the study and they would enable the analysis of phonetic changes.

Note: An abridged version of this paper has been printed in La Marca Hispanica, a journal published by the Department of Spanish and Portuguese of Brigham Young University. This paper differs from that version in several aspects, including the incorporation of the section on innovations.
