One-Stop Research: Using WWW for BI

Cathy Chiu

Follow this and additional works at: https://scholarsarchive.byu.edu/jeal

BYU ScholarsArchive Citation
I can think of at least two ways to present “Using the World-Wide Web (WWW) for Bibliographic Instruction (BI).” One is to present how library users can use WWW in general for their research, i.e., teaching them what resources are available on the Internet, how to search, and how to evaluate the information they find. The other, which I chose to do today, is to present how to use a specific WWW page which is intended as a one-stop research station. Information on this web page is carefully selected from the Internet for a certain field, e.g., East Asian studies. Researchers can find on this web page everything that is available on the Internet and related to their subject area without have to search any further. I take up the second approach not only because I want to share with you my experience in attempting to develop a one-stop research web page for East Asian studies and but to describe a workshop I offered on how to use the web page.

In the summer of 1995 the collection managers in our library at the University of California at Santa Barbara (UCSB) were given an assignment to design a World-Wide Web page for whatever collection each of us was responsible for. A two-hour training session on the Hypertext Markup Language was offered to all collection managers; after that we were on our own. I had to think hard to decide how to construct the web page. As a collection manager and information specialist, I have to ask myself the following three questions frequently if not continually.

1. How do I build a useful collection? What should go into the collection and what should not?
2. How do I help users locate the information they need?
3. How do I increase the users’ awareness of what resources are available and how they can make use of them?

I had to ask myself the same questions while designing my East Asian studies web page. To answer the first question, I again reviewed the courses offered by our East Asian studies program and the profile of each faculty member. By doing so I was able to come up with a list of subjects for which I would find information to put on the web page. Then I searched my memory for reference questions I had answered over the years. With that information I added a list of reference tools to the web page. After much work I have a web page that is intended as a one-stop research station that should meet all the research needs of the East Asian faculty and students on our campus. They can sit at home or at their office and logon to the East Asian studies web page. From there they can access on-line the catalogs of libraries all over the world, reference tools, news and magazines, and full-text electronic articles and books on East Asian subjects. My next plan was to make the faculty and students in the East Asian studies program aware of this resource and show them how to make use of it.

To achieve this I decided to offer a workshop. To publicize and promote the workshop, a flyer with detailed information including time, place, coverage, and intended audience, went out to the
East Asian studies program members two weeks prior to the workshop. I also sent e-mail messages as reminders.

At the beginning of the workshop, I gave a brief introduction to all the Internet tools available: e-mail, Telnet, ftp, Gopher, and World-Wide Web. Then I went directly into the East Asian Studies Web page to show the structure of the web page and explain the rationale of its organization. To allow the audience to absorb this information, I scheduled the workshop for two hours only. I tried to limit myself to simple demonstrations without going into details and allowed time for the audience to do the hands-on exercises. The first one I showed is the profile of the East Asian Library, including collection size, strengths, its address, telephone number, facsimile number, staff names, reference hours, and, most importantly, the on-line catalogs with which to access the collection. I pointed out that the audience could access from the web page the two main on-line catalogs of the library: PEGASUS, the UCSB On-ling Catalog and MELVYL, the University of California System Union On-line Catalog. One of the exercises was to have the audience come back later to connect to these two important catalogs to do some searches.

In the section on selected new books, the first part consists of books authored by our own faculty members and the second part are books recently purchased by the library. There is a form appended to the end of this section that users can fill in to recommend titles to be purchased for the collection. The procedure is as easy as sending an e-mail message.

I selected a few reference tools such as yearbooks, dictionaries, and currency converter for inclusion in the web page. The currency converter was a big hit. Seeing how it can convert in seconds U.S. dollar amounts into Renminbi, Japanese yen, and Korean won or visa versa, the audience was bowled over. Following the reference tools, I explained how I decided what went into the section labeled “Alphabetical Subject List of Internet Resources.” I showed the Haiku page and the Kabuki page, knowing two of the professors in the audience were doing research on those two topics. I encouraged the audience to give me input on subjects they want to see represented on this home page.

The News and Electronic Magazines section proved to be most popular with students. Before showing them the text in Chinese-Japanese-Korean (CJK) scripts on the news and magazines, I turned on the UnionWay CJK program. When showing Asahi Shinbun, I clicked on the Unionway JIS code. Clicking on the Guo Biao (GB) code in Unionway, I showed the audience Jen min jih pao material and clicking on the BIG 5 code, I showed them material in Xingdao Ribao, a newspaper in Hong Kong. By simply clicking on the appropriate code in the UnionWay pop-up menu, current newspapers and magazines in CJK languages appeared on the screen. After the workshop was over, several students came to inquire about where on campus computers equipped with UnionWay software were available.

Members of the faculty, on the other hand, were more interested in exploring other East Asian collections. They wanted to know what collections were completely on-line, the strengths of each collection, and how to go about accessing these collections' on-line catalogs. In the University of California system we are fortunate to have the MELVY system which provides access to the library holdings of all nine UC campuses and also serves as a gateway to national bibliographic utilities such as the Online Computer Library Center, Inc. (OCLC) and the Research Libraries Information Network (RLIN). Teaching people to search local on-line catalogs, I decided MELVYL, OCLC, and RLIN should be offered in a separate session.

In our web page there is a section on other East Asian collections and libraries. I demonstrated how to connect to their on-line catalogs and how to read the instructions for searching in them. The reason for searching individual on-line catalogs and not only OCLC or RLIN databases is
that most libraries do not upload their acquisition records and brief records to OCLC and RLIN. I explained which libraries had its holdings completely on-line. As for searching catalogs in other countries, I tried libraries in China, Hong Kong, and Taiwan. Most of them worked very well except for a few to which I could not make a connection. Afterwards I discovered that some libraries in East Asian countries shut down their on-line catalogs after nine o'clock at night, the time when libraries on this side of the earth are just beginning to open their doors.

I assumed that everyone in East Asian studies would be interested in the facts and cultures of East Asian countries. "General Information on East Asian Countries" is on the web page to serve just that purpose. It has information on population, history, culture, entertainment, restaurants, etc. I answered one particular question on where in Shanghai Hongqiao Airport is located by retrieving a map of Shanghai City from the web page.

Finally I told my audience that if they do not find what they need, they can always fall back to "Useful Web Sites Relating to East Asian Studies," and especially to the CEAL web page. If they still feel there is more they can find on a subject, they can try Netsearch for themselves.

The Internet provides a web of interconnected electronic information resources in many forms. Among them, a WWW page has the advantage of integrating sound, graphics, and images as well as the capability to link various resources such as Gopher, Usenet newsgroup, OPAC, Telnet, and ftp. Web page users never need to be aware of the variety of resources they are using. Librarians as information specialists can make a great contribution to the Internet by providing subject access to this growing global network of information while in the meantime benefiting local library users. This may explain why I was willing to spend a lot of time creating a one-stop research web page.

The essential elements in maintaining a one-stop research web page include subject expertise, bibliographic search skills, and lots of time. If the web page is not maintained by a subject specialist who is knowledgeable in bibliographic search on the Internet and who is not willing and able to spend hours regularly keeping the page current, the web page will not be able to serve its intended researchers well and will soon lose its credibility. With the advancement of technology, more resources are accessible in a faster and more efficient manner. With subject expertise and information management skills, librarians can help organize the information from various resources as well as teach our patrons skills to make use of it. I chose to create a web page to achieve both goals, but have had difficulty finding time to maintain the web page.

On the following pages I have given the material I used in the workshop to illustrate my points.
One-Stop Research: Using WWW for BI

Questions:

1. How to build up a useful collection? What should go into the collection and what not?

2. How to help users locate the information they need?

3. How to increase users' awareness of what resources are available and how they can make use of them?

Answers:

1. East Asian Studies Courses

2. Faculty Profile

3. Reference Questions
Internet Workshop
with hands-on exercises

Information Resources for East Asian Studies

Topics covered:  WWW resources
Searching OCLC and RLIN databases
Viewing Chinese, Japanese, and Korean characters
Other East Asian libraries and library catalogs
Electronic newspapers and magazines

Time:  3:00-5:00 pm, Wednesday, October 18, 1995
Place:  Room 1575, Davidson Library

Everyone is welcome but the workshop would be most beneficial for East Asian studies faculty and graduate students. Please call the East Asian Collection office at x2365 so we can prepare enough handouts for every participant.
1. Overview of Internet Tools
   • E-Mail (electronic mail)
   • Telnet (remote access)
   • FTP (file transfer)
   • Gopher (information menu)
   • World Wide Web (hypermedia)

2. InfoSurf East Asian Studies WWW home page
   • East Asian Library
     Collection size, telephone & fax number
     PEGASUS, MELVYL
   • Selected New Books

Holdings: 105,917 (100% online)
Online Public Access Catalogs: PEGASUS (NOTIS); MELVYL (UC System Union Catalog)

Reference Hours: 8:00am-5:00pm Mon.-Fri.

East Asian Library Staff:
Cathy Chiu – Head / East Asian Librarian
Peter Pang – Chinese Specialist / Cataloger
Seiko Tu – Japanese Specialist / Cataloger

The mission of the East Asian Library is to support the research and curriculum of East Asian studies at the UCSB academic community. It currently owns 105,917 volumes of Chinese, Japanese, and Korean language materials. Chinese language materials constitute 60% of the collection; Japanese materials 39%. The Library started acquiring Korean books in 1992 for the new Korean program. There are only a few hundred Korean titles.

The Library houses materials in all subjects on East Asian studies except for arts, music, and science (LC classification N, M, and Q to V). The strength of the collection is Chinese literature in medieval and modern period, contemporary Chinese and Japanese government and politics, economic and social conditions, and religious studies (especially Buddhism and Taoism). The Library Office, located in Room 5539 and Room 5537, provides reference services from 8:00 am to 5:00 pm Monday through Friday.

Created in 1967, the Library collection is completely online since July, 1995 and accessible through PEGASUS, RLIN, OCLC, or MELVYL. Its holding symbol on RLIN is "CASO"; and "CUT" on
Selected New Books
