Endangered, Threatened, Extinct, Endemic, and Rare or Restricted Utah Vascular Plants

Stanley L. Welsh1, N. Duane Atwood2, and James L. Reveal3

Abstract.—The status of 382 vascular plant taxa with distribution in Utah is presented. Some 66 species are possibly endangered, 198 threatened, 7 extinct, and 20 extirpated within the state; 4 species have questionable taxonomic status. Included in the list are nearly 225 species of endemic plants, many of which are among the possibly endangered, threatened, and extirpated species. Bibliographic citations, type locality, status, and distribution by counties is included for each species. Two new species are described: Psoralea paviensis and Eriogonum natum. One new name, Astragalus barnebyi, is proposed; and one new variety, Eriogonum umbellatum var. deserticum, is proposed. The following new combinations are made: Cycladenia humilis var. jonesii; Aralia racemosa ssp. bicrenata; Heterotheca jonesii; Hymenoxys depressa; Xanthocerehalum sarothrae var. pomariense; Thelypodium integrifolium var. complanatum; Thelypodium saigitatum var. ovalifolium; Arenaria kingii var. plateaensis; Psorothamnus thompsoniae; Najas caespitosa; Oenothera gouldii; Eriogonum corymbosum var. revelianum; Penstemon humilis var. obtusifolius; Penstemon lentus var. albiflorus; and Viola purpurea var. charlestonensis.

The vascular plant flora of Utah is both large and complex. Its components are diverse, representing numerous floristic elements from many parts of North America, including unique and provincial elements restricted to the state. Species of many major geographical groupings of plants occur within the multiplicity of habitats available within Utah, all to a greater or lesser degree of their entire range. Some of these species are at the edge of their total range, and these occur in smaller portions of the state. Other taxa occur only in one or few peculiar, limited edaphic situations or habitats, while others are more widespread and cover a broad altitudinal or latitudinal expanse of Utah.

Those plants that occur only within the state, or within the natural basins that overlap the artificial political boundaries of the state, are known as local endemics. Their range can be widespread within Utah, but more often they are restricted in distribution to very limited areas. These are plants that are of much interest to scientists, because they present living proof of the origin and evolution of species, origin of floras, and indications of relationships of plant species. These plants are those entities which have originated here or are mere remnants of species which have had a much broader area of distribution in the past.

The impress of man and his activities onto the natural habitats of Utah has reduced the area available to most native or indigenous plants. Those species of broad extent and wide ecological tolerances have withstood these activities best, with only a reduction in their range and number. Less frequently their range has increased in size as less-tolerant plants of adjoining areas have been reduced. However, many of the most unique species have areas of distribution that are very small, with only a few known individuals. In some examples the species have apparently ceased to exist in the Utah flora. In most cases the new habitats made

available by the activities of man have been occupied by introduced, cultivated, and adventive plants from the Old World. These are the crop plants and weeds of modern agricultural and industrial society.

The phalanxes of intolerant native plants have been retreating under the impacts of agriculture and grazing for more than a century. Industrial development during most of that period was limited in extent, if not in effect. In Utah most of these activities were restricted mainly to the broad valleys and river basins, where plant communities that were relatively fragile are now almost totally lacking within the state. However, these sites apparently contained few of the narrowly endemic plant species. With the advent of the second half of the twentieth century, there has occurred a resurgence of economic activities, mineral exploration, and a greater use of the public lands which hitherto had been considered as useful (if considered useful at all) only for grazing and watershed. The rapid spread of industrial development into previously undeveloped, low-elevation, arid lands in the southern portions of the state is all the more impressive when one considers that most of the narrowly restricted plants occur in those areas (Figs. 1 and 2). Plant species which were once remote from the impacts of civilization—industrial, agricultural, or recreational activities—are now threatened not only by the effects of ranching, construction, and off-road travel, but even by the very agencies of government which are established by law to oversee in the public trust the proper use and protection of the public lands. At the present time, hardly a part of Utah, even that set aside as national parks, monuments, or wilderness areas, is safe from degradation by masses of people or by those seeking to exploit the very natural resources and features these unique areas were established to protect.

Inroads into the most remote and most arid portions of the state now guarantee further reduction of the unique flora of Utah. Naturally, those entities that will suffer greatest from the commercialization of the state will be those which have specific and naturally restricted areas of

---

Fig. 1. Distributional incidence of endangered, threatened, extinct, or extirpated Utah plants by county; total number is greater than the total for the state due to overlap.

Fig. 2. Distribution of endangered, threatened, extinct, and rare or restricted Utah plants, by phytogeographical subdivision.
distribution. Only the most enlightened management and protection from unreasonable exploitation will ensure the continuation of the rich indigenous flora that these plants represent.

Commerical exploitation need not bring about the demise of species, although the basic nature of the flora will change. It is a fact of biology that in even the most enlightened and carefully planned development, there will be a reduction in the native vegetation. Reclamation attempts will be made with Old World introductions, or with selected ecotypes of indigenous plants, and not with those that occurred in the region prior to its modification. Both of these types of plants can hardly replace the quality of those cleared and destroyed by construction activities. Revegetation of a disturbed site can be more or less productive from an economic standpoint, but natural plant succession will require generations before any real resemblance of the natural vegetation will again be possible, and then, depending on the nature of the disturbance, the native vegetation occupying the site can be of an entirely different composition than formerly. Indigenous taxa with specific habitat requirements will not survive if those habitats are altered, and there is no known technology which can simulate some of the peculiar habitats present in the state—which are now occupied by narrowly restricted plants—and no technology can ever replace an extinct species (Reveal 1973b).

Because of the rate at which Utah is being impressed by all the forces of a modern society, it seems important that the endangered, threatened, extinct, endemic, and rare or restricted vascular plants of Utah be inventoried, and that their known or historic areas of distribution be outlined. That task is the basic goal of this paper, but this is only a pioneering effort. Much work remains to be done.

While the present paper was in preparation, the secretary of the Smithsonian Institution, S. Dillon Ripley, transmitted to the Congress of the United States a "report on endangered and threatened species of the United States." This report (cited herein as "Ripley 1975") lists numerous plants from Utah as either threatened, endangered, possibly extinct, or probably extinct. Each category was abbreviated as T, E, PoEx, or PrEx, respectively.

That report was prepared during the calendar year of 1974 as mandated by the Endangered Species Act of 1973 (Public Law 93-205) in which the secretary of the Smithsonian was to report to Congress within one year on all of the "species of plants which are now or may become endangered or threatened" in the United States (sec. 12). The Congress provided no funding for the preparation of this report, and the time restrictions prevented a detailed field examination of all species included in the list. Some states, notably California and Texas, with active offices concerned with endangered plant species, were able to provide precise data; other states were able to supply some information, and still others had little or no input into the final report, except that gathered by the committee established by the secretary to prepare a statement for the Congress. The data for the state of Utah was provided by a number of individuals (including the authors of this paper, and Reveal served on the Smithsonian committee), but time did not permit the type of critical examination of each taxon which has been largely possible for the present paper. The Smithsonian report (Ripley 1975) was published in the Federal Register (Schreiner 1975) as a "notice of consideration," and we understand that the Department of Interior will submit a revised listing in the near future. Disagreement as to the designation of degree of endangerment between this paper and that of Ripley (1975) represents the results of a more detailed and concentrated survey of the Utah flora, and is based on detailed literature search and personal information of the present authors and that of their colleagues who have reviewed the manuscript. These differences have largely been resolved and will appear in the Smithsonian's revised list to be submitted early in 1976 to the Secretary of the Interior. Much of the information has been acquired through many years of investigation of the Utah flora, both in the field and in the herbarium, and has been stimulated by the Ripley (1975) report.

The designation of the status of an individual taxon as belonging to a partic-
ular category is subjective. Still, it is based on the best information available to us at the present time (a requirement of the Endangered Species Act). A plant species is considered as "endangered" when its known area of distribution is very small, and when the expected development or exploitation of the area occupied has already occurred or is imminent. A "threatened" plant is one of somewhat larger known areal extent, but which has experienced or is now experiencing a reduction of its natural distributional area. These are the two major categories required by law to be designated. Plants that are "rare or restricted" are those which have been collected only occasionally or which are known from very limited regions of the state; they may or may not be widely distributed elsewhere outside the political confines of Utah. Introduced species are excluded from this category, even though they might be restricted or even rare.

Plants considered to be "endemic" are those whose entire distributional area is within Utah or within one of the natural drainage basins which overlap the political boundaries of the state. Some plants in this category especially are poorly known taxonomically and biologically, and in these cases we have so indicated the need for a careful systematic evaluation of the taxon to determine the status of the plant entity.

All statements about status of those plants not endemic to Utah are with regard to the occurrence of those plants within Utah. In many, if not most of these cases, the species are widespread and common to abundant in other portions of their area of distribution. If they are limited, rare, or possibly extirpated from Utah, only that portion of their range is considered in making the designation. This follows the guidelines established by California and Texas in which the endangered and threatened lists are based solely upon the situation of the plant in question within the confines of the state boundaries (Table 1).

Plants listed in one of the categories designated above by Ripley (1975) are included here, whether or not they are considered as something other than threatened, endangered, or extinct on the new list that will be published in 1976. Ob-
cies Act of 1973. Nevertheless, those agencies charged with protection of endangered or threatened plants must determine the precise localities of those entities in order to plan for their survival.

Maps are presented (Figs. 1 and 2) which demonstrate the unequal distribution of these unusual plants. In Figure 1 the number of taxa known of each county is indicated. The total appears to be very large, but this is due to many of the species being listed in several counties when area of distribution occurs outside a single county. Phytogeographic regions of Utah are plotted in Figure 2, and the number of taxa considered to be unusual is cited for each. The number of taxa totals are less than for the entire state because some distributional data are so indefinite as to not be plottable. Also, the figures represent an attempt to plot plants within their main area of distribution; double representation has been avoided. This accounts for the apparent discrepancies between the two maps.

Recommendations

Land use planning should take into account the presence of the unusual plants present in the state of Utah. If and when the Secretary of Interior proclaims any species of plants found in Utah as endangered or threatened, they will fall under the protective provisions of the Endangered Species Act which, in section seven, calls upon all federal departments and agencies "to insure that actions authorized, funded, or carried out by them do not jeopardize the continued existence of such endangered species and threatened species or result in the destruction or modification of habitat of such species." Those which are protected by law must be determined, and their areas of distribution should become known to the agencies responsible for their protection. Questionable taxonomic units should be investigated in order to determine their nature and area of distribution. Plants thought to be extinct should be sought in carefully coordinated field studies. The results of these studies should be reported to the Secretary of the Interior so that information about the various species may be updated from time to time, and so the status of each taxon can be reviewed. When new species are described from Utah, their status should be evaluated, and if they should prove to be endangered or threatened, that information should be presented to the Secretary so that such species may be considered for the federal endangered species list.

In a recent issue of the Federal Register, Greenwald (1975) proposed a "rule-making" for various amendments to the Endangered Species Act of 1973. These amendments introduce the term "plant" into many sections of the act. However, as Lachenmeier (1974) has pointed out, there are several legal and constitutional questions about the act that need to be resolved still, and from a botanical point of view, there still exist certain discriminatory differences between "wildlife" and "plants." These must be resolved in the future.

In and for the state of Utah, we recommend that a review board be appointed to oversee the protection of Utah's most unique plants, and funding should be forthcoming to allow a real understanding not only of the endangered and threatened species, but the entire state's flora. The state should adopt the federal act and include within its own listing those species of the state which are endangered or threatened within its borders. Policies should be adopted that will determine basic land use with regard to these unique plants, and "critical habitats" as provided by the act should be investigated throughout the state (see also Greenwald & Gehring 1975). Above all, prompt actions must be taken by the state to preserve and protect the state's unique flora, and the members of the botanical community must be ready to aid and assist all levels of government in this important endeavor.

Note

In the following list, we are abbreviating journals according to the abbreviations listed by Lawrence et al. (1968) and herbaria according to listing given by Holmgren and Keuken (1974). We have attempted to give the type information as published in the original place of publication; however, we are not attempting to typify any name, nor is the herbarium cited considered a statement of lectotypification. This information is given for the convenience of the reader. For the most part, the abbreviations of the authors fol-
low the unpublished suggestions of the Index Kewensis staff.

ACKNOWLEDGMENTS

The authors wish to acknowledge the critical reviews supplied by our colleagues in the study of Utah’s plant taxonomy. Especially important help and criticism was supplied by Arthur H. Holmgren, Lois Arnow, and Andrew H. Barnum.

APIACEAE

Angelica wheeleri S. Wats., Amer. Naturalist 7: 301. 1873.

Type: Utah, Wheeler s.n. (GH).

Status: Endemic, evidently rare and local, possibly threatened.

Distribution: Northern and central Utah (Mathias & Constance 1945).

Type: Half-way Station, west of Wa Wa, Millard or Beaver Co., Utah, 7,000 feet, 15 May 1906, M. E. Jones s. n. (POM).

Status: Restricted and locally abundant, neither threatened nor endangered (Ripley, T).

Distribution: Western Utah (Millard Co., Harrison 6370; Mathews 14 [BRY]), and adjacent Nevada (Mathias & Constance 1945).

Type: Juab, Juab Co., Utah, 4,000 feet, 30 Apr 1880, M. E. Jones 1691 (us).

Status: Endemic, rare and restricted, threatened (Ripley, T).

Distribution: Western Utah (Sanpete Co., Mabey 5300 [BRY]).

Type: Among loose rocks on southern slopes of mesas, Myton, Duchesne Co., Utah, 5,000 feet, 20 May 1908, M. E. Jones s.n. (POM).

Status: Endemic, rare and threatened, threatened (Ripley, E).

Distribution: Duchesne and Uintah counties, Utah (Welsh 180 [BRY]): Holmgren & Reveal 1887 [NY, UTC]; Holmgren & Holmgren 5169 [BRY, NY, UTC]).

Cymopterus jonesii Coult. & Rose, Rev. N. Amer. Umbell. 80. 1888.

Type: Frisco, Beaver Co., Utah, 8,000 feet, 22 Jun 1880, M. E. Jones 1808 (US).

Status: Rare and restricted.

Distribution: Southwestern Utah and Nevada (Mathias & Constance 1945).

Type: Shadscale dominated bajada, on gravelly pedimental fan east of None Butte, ca 17 miles east of Glen Canyon City, Kane Co., Utah, 31 May 1975, S. L. Welsh 12740 (BRY).

Status: Endemic, local; possibly threatened.

Distribution: Eastern Kane Co., Utah.

Type: On the upper part of the “Breaks” at Cedar Breaks, Iron Co., Utah, ca 10,500 feet, Mathias 723 (MO).

Status: Endemic, rare and restricted to Cedar Breaks, possibly endangered (Ripley, E).

Status: Widespread and at least locally abundant, neither threatened nor endangered (Ripley, T).

Distribution: Garfield, Grand, Kane, Millard, San Juan, Uintah, Washington, and Wayne counties, Utah (BRY, UTC), and northern Arizona (Mathias & Constance 1945).

Type: Richfield, Sevier Co., Utah, 18 Jun 1898, M. E. Jones 30 (US).

Status: Endemic, rare and local, possibly threatened (Ripley, T).

Type: Aquarius Plateau, Utah 5 Aug 1905, Rydberg & Carlton 7473 (NY).

Status: Endemic, rare and local; possibly threatened.

Type: Proposed dam site, near Wilson Mesa, Grand Co., Utah, Rydberg & Garrett 8371 (NY).

Status: Endemic, rare and local, possibly threatened.

Distribution: Grand Co., Utah (BRY; UTC).

Status: Rare and local, possibly threatened.

Type: Near the hotel, on dry slopes bordering Bryce Canyon, Garfield Co., Utah, 8,600 feet, Mathias 670 (MO).

Status: Endemic, local, possibly threatened (Ripley, T).

Distribution: Garfield, Iron, and Kane counties, Utah (BRY, UTC).

Type: Frisco, Beaver Co., Utah, 2,400 meters, Jones 1864 (US).

Status: Endemic (but possibly in Mohave Co., Arizona), locally common, not threatened nor endangered.

Distribution: Beaver, Iron (UT), Millard, and Washington counties, Utah (BRY).

Type: Near Logan, Cache Co., Utah, 9 Aug 1895, Rydberg s.n. (NY).

Status: Endemic, possibly threatened.

Distribution: Cache Co., Utah (Holmgren 3595 [UTC]).

Apoecynaceae

Type: San Rafael Swell, Emery Co., Utah, 19 May 1914, M. E. Jones s.n. (CAS).

Status: Endemic, rare and endangered (Ripley, E).

Distribution: Emery and Grand counties, Utah.

This entity is known in Utah from three basic collections: the type as cited above, a collection by Cottam (UT) also from the San Rafael Swell, and a collection from Castle Valley, Grand Co., Utah (Welsh 1970b).

Araliaceae

Status: Rare; restricted to Zion Narrows, Washington Co., Utah.

Distribution: Washington Co., Utah (Welsh 12366 [BRY]), and from southeastern Canada south to Georgia, westward to Arizona and northern Mexico (Kearney & Peebles 1951); the subspecies is from Utah and Arizona.

Asclepiadaceae

Status: Rare, threatened.

**Status:** Rare.

**Distribution:** Grand (Rydb. & Garrett 8504 [UTC]) and San Juan (Welsh et al. 2930 [BRY]) counties, Utah; from Nebraska to Texas and Arizona.

**Type:** Capital Wash, near the Henry Mts., Wayne Co., Utah, 5,000 feet, in sandy gulch, 19 Jul 1894, M. E. Jones 5650 (POm).

**Status:** Endemic to the state but common, neither threatened nor endangered.

**Distribution:** Emery, Garfield, San Juan, Uintah, and Wayne counties, Utah (BRY).

**Type:** Frequent, sandy soil, vicinity of water tanks, Calf Spring Canyon, 5,000 feet, San Rafael Swell, 18 miles southeast of Castle Dale, Emery Co., Utah, 10 May 1940, Maguire & Maguire 18310 (UTC).

**Status:** Endemic, common in disjunct populations on the San Rafael Swell; possibly threatened (Ripley, T).

**Distribution:** Emery (Cottam 5500, Harrison 8067, Higgins & Reveal 1285A [BRY], Grand [see Woodson 1954], and Wayne (Harrison 11223 and 11891 [BRY]) counties, Utah.

Asteraceae

**Status:** Restricted, rare except locally, not threatened nor endangered.

**Distribution:** Carbon, Duchesne, Emery, San Juan, Uintah, and Wayne counties, Utah, and western Colorado (BRY, UTC).

**Type:** Along the San Juan River near Bluff, San Juan Co., Utah, 1,200-1,500 meters, 1-2 Jul 1911, Rydberg 10001 (UTC).

**Status:** Habitat specific, in hanging gardens, restricted and possibly threatened.

**Distribution:** Garfield, Grand, Kane, San Juan, and Wayne counties, Utah (BRY), and Black Mesa, Apache Co., Arizona (Howell & McClintock 1960).

**Status:** Habitat specific, in heavy clay soils, restricted and rare.

**Distribution:** Carbon, Duchesne, Emery, Grand, Uintah, and Wayne counties, Utah (BRY, UTC), and western Colorado (Harrington 1954).

**Type:** Abajo Mts. (eastern range), 3,000-5,300 meters, San Juan Co., Utah, 17 Aug 1911, Rydberg & Garrett 9755 (NY).

**Status:** Endemic, rare and threatened (Ripley, T).

**Distribution:** Garfield, Kane, and San Juan counties, Utah (BRY).

**Type:** Rocky gulch above Cottonwood Canyon, Wasatch Mountains, Salt Lake Co., Utah, 8,000-9,000 feet, Aug 1869, Waston 547 (US).

**Status:** Endemic and rare, restricted to rock crevices, threatened.

**Distribution:** Salt Lake, Tooele, Utah, and Weber counties, Utah (BRY, UTC: Cronquist 1947).

Erigeron cronquistii Maguire, Brittonia 5: 201. 1944.

**Type:** Cliffs, north side of Logan Canyon ½ mile below forks, Bear River Range, Cache Co., Utah, 5,800 feet, 20 May 1939, Maguire 16681 (NY).

**Status:** Endemic, rare and threatened (Ripley, T).

**Distribution:** Cache Co., Utah (Cronquist 1947).
   Type: Big Cottonwood Canyon, Salt Lake Co., Utah. 28 Jun 1905, Garrett 1310 (RM).
   Status: Endemic, rare and possibly threatened (Ripley, T). 
   Distribution: High altitudes in Box Elder (UT). Salt Lake and Utah counties, Utah (BRY; Cronquist 1947).

   Type: Canyon to Cedar Breaks, 12 miles east of Cedar City, Iron Co., Utah. 5 Aug 1934, Maguire 14947 (NY).
   Status: Endemic and rare, endangered (Ripley, E).
   Distribution: Iron Co., Utah; known only from the type locality (Cronquist 1947).

   Status: Endemic, rare and endangered (Ripley, E).
   Distribution: San Juan Co., Utah; known only from the type locality (Welsh & Moore 1968).

   Type: Dry rocky sandy canyon bottom, Calf Spring Wash, 1.5 mile up San Rafael Swell, 16 Jun 1940, 5,500 feet, Maguire 18459 (NY).
   Status: Endemic, rare and possibly extinct (Ripley, E).
   Distribution: Emery Co., Utah; known only from the type locality.

   Type: LaSal Mts., Grand or San Juan Co., Utah. 7 Jul 1911, Rydberg & Garrett 8671 (NY).
   Status: Endemic, rare and possibly threatened (Ripley, T).
   Distribution: LaSal Mts., Grand and San Juan counties, Utah (Cronquist 1947).

   Type: Clear Creek, Zion N.P., Washington Co., Utah. 8 Sep 1938, Eastwood & Howell 6339 (CAS).
   Status: Endemic, rare and endangered (Ripley, E).
   Distribution: Kane (Harrison 11085 [BRY] and Washington counties, Utah (Cronquist 1947).

   Status: Endemic, very rare and endangered (Ripley, E).
   Distribution: Washington Co., Utah; known only from type locality.

   Status: Rare, restricted, but not apparently threatened or endangered.
   Distribution: Grand Co., Utah (Maguire 1937; Harrison et al. 1964); Colorado, New Mexico and northern Mexico.

Gaillardia flava Rydb., N. Amer. Fl. 34: 139. 1915.
   Type: Lower Crossing of the Price River (see Jones 1965). Emery Co., Utah. 2 Jul 1898, M. E. Jones 6412 (US).
   Status: Endemic, rare and endangered.
   Distribution: Emery Co., Utah (Cottam & Hutchings 2176 [BRY]).

   Type: Rabbit Valley, Wayne Co., Utah. 7,000 feet, 1875, Ward s.n. (GH).
   Status: Endemic, common throughout its range, neither threatened nor endangered.
   Distribution: Carbon, Emery, Garfield, Grand, and Wayne counties, Utah (BRY, UTC).

   Type: Near Cedar City, Iron Co., Utah. 6,000 feet, 10 May 1894, M. E. Jones 5204v is the first of two collections cited (POM).
   Status: Uncommon, habitat specific,
neither endangered nor threatened (Ripley, T).

*Type:* Desert between Hanksville and Henry Mts., Wayne Co., Utah, 5 Jul 1930, Stanton 4806 (us).

*Status:* Restricted to dunes and sandy washes, where locally abundant. Neither threatened nor endangered.

*Status:* Rare, possibly threatened.

*Type:* 3.3 miles west of Hurricane, Washington Co., Utah, 29 Jun 1957, Stoutamire 2574 (ind).

*Status:* Rare, restricted and possibly threatened.

*Type:* Springdale, Washington Co., Utah, 4,000 feet, 16 May 1894, M. E. Jones 5219a (pmx).

*Status:* Endemic, rare, local, and endangered.

*Status:* Rare, local and restricted.

*Status:* Rare, possibly endangered.

*Status:* Local, rare and possibly threatened.

*Type:* Cedar Breaks rim, Iron Co., Utah, 23 Jun 1940, Maguire 19023 (ny).

*Status:* Restricted but locally common, not threatened nor endangered.

*Type:* St. George, Washington Co., Utah, 1877, Palmer 270 (ny).

*Status:* Endemic, rare and restricted, threatened (Ripley, T).

*Status:* Rare and local, possibly threatened.

**Status:** Rare and local, possibly threatened.

**Distribution:** Emery (bry) and
Garfield (ut) counties, Utah, and from Colorado.

Status: Restricted and rare, possibly threatened.

Distribution: Millard Co., Utah (bry), and adjacent Nevada west to eastern California.

Type: Frequent on adobe clay, 1 mile south of Price, Carbon Co., Utah, 5 Jun 1940, Maguire 18417 (ny).

Status: Endemic, rare, restricted and endangered.

Distribution: Carbon Co., Utah; known only from the type locality.

Type: Barren clay slopes in pinyon-juniper zone, 11 miles northeast of Henrieville, Garfield Co., Utah, 7,000 feet, 31 May 1961, Cronquist 9164 (ny).

Status: Endemic, rare and threatened.

Distribution: Garfield and Kane counties, Utah (bry. utc).

Type: Warm Point, 5 miles southwest of Desert Range Experiment Station headquarters, Millard Co., Utah, 10 Jun 1941, Maguire 20859 (ny).

Status: Rare and restricted, neither threatened nor endangered (Ripley, T).

Distribution: Beaver and Millard counties, Utah (bry.), and Eureka, Lincoln and White Pine counties, Nevada (Maguire 1947).

Type: Wasatch Mts., above Cottonwood Canyon, Salt Lake Co., Utah, 1869, 9,000 feet, Watson 507 (gh).

Status: Endemic, rare and restricted, possibly threatened.

Distribution: Cache, Salt Lake and Utah counties, Utah (bry. utc).

Status: Local and infrequent.

Distribution: Washington Co., Utah (Atwood 1966 [bry. wts.]); also in Nevada and California.

Type: On nearly bare clayey and gravelly knolls on ridges, Theodore [now Duchesne], Duchesne Co., Utah, 6,000 feet, M. E. Jones s.n. (pom).

Status: Endemic, rare and restricted, threatened (Ripley, T).

Distribution: Duchesne and Emery counties, Utah (bry. ny).

Type: Edge of swampy places, Geys-er Pass, LaSal Mts., Utah, 10,500 feet, Payson & Payson 4097 (mo).

Status: Endemic, rare, restricted and threatened (Ripley, T).

Distribution: San Juan Co., Utah; known only from the type area.

Status: Local and rare, threatened.

Distribution: Grand Co., Utah (utc); Wyoming and southern Montana.

Type: Ca 6 miles south of Fremont Junction along Utah Highway 72, on low, rolling exposed gray clay slopes, among scattered igneous boulders, Sevier Co., Utah, ca 6,500 feet, 1 May 1966, Reveal & Welsh 721 (bry).

Status: Endemic, rare and restricted, endangered (Ripley, E).

Distribution: Sevier Co., Utah (bry; Welsh & Reveal 1968).

Type: Benches of the Uinta Mts., near Theodore [now Duchesne], Duchesne Co., Utah, 14 May 1908, M. E. Jones s.n. (POM).

Status: Endemic, locally restricted, possibly threatened.

Distribution: Duchesne and Uintah counties, Utah (Reveal 1970b).

Type: Bryce Canyon, Garfield Co., Utah, 19 Jun 1933, Eastwood & Howell 727 (CAS).

Status: Endemic, edaphically restricted, possibly threatened.

Distribution: Garfield and Kane counties, Utah (Beam 1957; Reveal 1970b).

Type: Locally plentiful on gumo-clay knolls and bluffs, lower Cottonwood Canyon near its confluence with Paria River, about 41 miles southeast of Cannonville, Kane Co., Utah, 4,500 feet, 12 Jun 1966, Barneby 14435 (NY).

Status: Endemic, local on Tropic Shale formation, threatened (Ripley, E).

Distribution: Cottonwood Canyon east to Last Chance Canyon, Kane Co., Utah (Bry, UTC).

Xanthocephalum sarothrae (Pursh) Shinn.
ners var. pomariense (Welsh) Welsh, comb. nov., based on Gutierrezia saro.

Type: Sandy flat, base of sandstone cliffs, Frontier formation, mouth of Orchard Creek Draw, Dinosaur N.M.L. Uintah Co., Utah, 2 Oct 1969, Welsh et al. 9471 (BRY).

Status: Endemic, rare and threatened.

Berberidaceae

Status: Rare, floristically restricted to seeps and hanging gardens.

Distribution: San Juan (Maguire 5904, Holmgren 13850 [UTC]; Moore 204a; Welsh & Moore 3839 [BRY]; Maguire 1937); southern Colorado and New Mexico.

Betulaceae

Type: City Creek Canyon, Salt Lake Co., Utah, 18 Apr 1900, Stokes s.n. (NY).

Status: Rare; a putative hybrid between B. occidentalis Hook and B. papyrifera Marsh.

Distribution: In Utah known only from the type locality; the hybrid is widespread north of Utah (Dugle 1966).

Ostrya knowltonii Coville, Gard. & Forest 7: 114. 1894.

Status: Rare, disjunct in hanging gardens, along seeps and on slickrock in sandstone canyons.

Distribution: Grand (Cottam 2145 and 556 [BRY, UTC]), Kane (Welsh & Toft 11871 [BRY]), San Juan (Welsh et al. 2939, 2961 and 3721; Moore 336; Welsh 11893; Welsh & Moore 11783; Welsh & Atwood 11693 and 11711; Atwood 4103 [BRY]); northern Arizona, southwestern New Mexico and western Texas (Little 1953; Correll & Johnston 1970).

Boraginaceae

Status: Endemic, rare, threatened (Ripley, T).

Type: 6.5 miles north of Jensen, Uintah Co., Utah, 19 Jun 1925, Osterhout 6414 (RM).

Status: Endemic, locally common in the Uinta Basin, neither threatened nor endangered (Ripley, E.).

Status: Rare and obscure.

Distribution: Daggett, Duchesne and Uintah counties, Utah (Higgins 1971).

Type: Ca 8 miles west of Desert Range Experiment Station headquarters, along Utah Highway 21, Millard Co., Utah, 18 Jun 1968, Higgins 1613 (BRY).

Status: Endemic, rare and local, threatened (Ripley, T).

Status: Rare and possibly threatened (Ripley, T).

Type: On bench west of Green River, north of the mouth of Sand Wash, Uintah Co., Utah, 28 May 1933, Graham 7924 (GH).

Status: Endemic, locally abundant, on white shale outcrops along Willow Creek, possibly threatened (Ripley, E).

Status: Endemic, locally common, threatened (Ripley, E).

Type: San Rafael Swell, Emery Co., Utah. 15 May 1914, M. E. Jones s.n. (POM).

Status: Endemic, rare except in clay barrens in the San Rafael Swell, threatened (Ripley, E).

Distribution: San Rafael Swell, Emery Co., Utah (Higgins 1971).

Status: Rare and restricted in Grand Valley.

Type: Emery, Emery Co., Utah. 16 May 1894, M. E. Jones 5443p (POM).

Status: Rare and restricted to clay soils; threatened.

Distribution: Carbon, Emery, and Garfield counties, Utah (Higgins 1971).

Type: On an outcrop 100 meters south of Red Canyon Campground, along Utah Highway 12, 21 Jul 1968, Higgins 1788 (BRY).

Status: Endemic, rare and endangered (Ripley, E).

Status: Rare or obscure.

Distribution: Disjunct in Duchesne, San Juan, and Wayne counties, Utah, and in Mesa Co., Colorado (Higgins 1971).

**Status:** Rare, San Rafael Swell, threatened.

**Distribution:** Emery Co., Utah, western Colorado and northwestern New Mexico (Higgins 1971).

**Type:** Shale hillside on Thorne's Ranch, near Willow Creek, ca 22 miles south of Ouray, Uintah Co., Utah, 16 Jun 1937. **Rollins 1715 (GH).**

**Status:** Endemic, locally common, neither threatened nor endangered.

**Distribution:** Uinta Basin, in both Duchesne and Uintah counties, and on the San Rafael Swell, Emery Co., Utah (Higgins 1971).

**Status:** Rare and restricted, threatened (Ripley, T).

**Distribution:** Vicinity of Fredonia, Coconino, and Mohave counties, Arizona, and in Washington Co., Utah (Higgins 1971).

**Status:** Rare, but neither threatened nor endangered (Ripley, T).

**Distribution:** Daggett, Summit, and Uintah counties, Utah; also in Moffat Co., Colorado, and Carbon Co., Wyoming (Higgins 1971).

**Type:** Court House Wash, near Moab, Grand Co., Utah, 25 May 1892, **Eastwood s.n. (CAS).**

**Status:** Endemic, common and widespread.

**Distribution:** Emery, Grand, San Juan, and eastern Wayne counties, Utah (Higgins 1971).

**Type:** Court House Wash, near Moab, Grand Co., Utah, 25 May 1892, **Eastwood s.n. (CAS).**

**Status:** Endemic, common and widespread.

**Distribution:** Carbon, Emery, Garfield, Grand, and Wayne counties, Utah (Higgins 1971).

**Type:** Pine Valley Mts., ca 1.5 miles up Forsyth Trail from Pine Valley, 30 May 1968, 7,300 feet. Gentry 2002 (NY).

**Status:** Endemic, restricted but locally common.

**Distribution:** Utah, Wasatch, and Washington counties, Utah (Gentry 1974).

Mertensia arizonica Greene, Pittonia 3: 197. 1897.

**Type:** "Arizona," without definite locality, but more likely from southern Utah, 1869, **Palmer s.n. (US).**

**Status:** Endemic (?), locally common; the var. arizonica is not known from Arizona in modern times.

**Distribution:** Beaver, Garfield, Iron, Piute, and Washington counties, Utah (Higgins 1972a).

**Status:** Rare and restricted, possibly threatened.

**Distribution:** Bald Mtn., Summit Co., Utah (Maguire 16499; Weber 3894 [UTC]) and north central Colorado (Williams 1937; Higgins 1972a).

**Status:** Rare, known from a single collection from the Uinta Mts.

**Distribution:** Daggett Co., Utah (Williams 599 [BM]); southeastern Wyoming and adjacent Colorado (Williams 1937; Higgins 1972a).
**Brassicaceae**

**Status:** Rare and possibly threatened (Ripley, T).

**Distribution:** Daggett Co., Utah (Rollins 1941); Albany and Sweetwater counties, Wyoming.

**Type:** Ca 18 miles north of Vernal, Uintah Co., Utah, Jun 1937, Rollins 1757 (GH).

**Status:** Rare and threatened (Ripley, T).

**Distribution:** Daggett and Uintah counties, Utah, and Albany Co., Wyoming (Rollins 1941).

**Type:** Ca 75 miles west of Blanding and 10 miles east of Hite, San Juan Co., Utah, 16 May 1961, Cronquist 9033 (NY).

**Status:** Endemic, rare though widespread, neither threatened nor endangered.

**Distribution:** Carbon, Emery, Garfield, Grand, San Juan, and Wayne counties, Utah (Bry. UtC).

**Type:** Rocky soil on east slope of Mt. Naomi, Bear River Range, Cache Co., Utah, 9,600 feet, Maguire et al. 14161 (WTU).

**Status:** Endemic, restricted and possibly threatened.

**Distribution:** Cache Co., Utah (Hitchcock 1941).

**Type:** Cottonwood Canyon, Wellsville Mts., Box Elder Co., Utah, 25 May 1932, Burke 2968 (Ut).

**Status:** Endemic, restricted and threatened.

**Distribution:** Box Elder (Hitchcock 1941), and Weber (Clark 2332 [Bry. WSCO]) counties, Utah.

**Status:** Endangered or possibly exirpted.

**Distribution:** Flaming Gorge, Daggett Co., Utah, and adjacent Sweetwater Co., Wyoming (Rollins 1953).

**Type:** Marysville, Piute Co., Utah, above timber line, 1894, M. E. Jones 5936 (US).

**Status:** Endemic, rare and threatened (Ripley, T).

**Distribution:** Garfield and Piute counties, Utah (Hitchcock 1941).

**Type:** Cedar Breaks, Iron Co., Utah, Goodman & Hitchcock 1622 (MO).

**Status:** Endemic, infrequent and possibly threatened (Ripley, T).

**Distribution:** Garfield, Iron and Kane counties, Utah (Bry. UtC).

**Type:** Zion Canyon, Washington Co., Utah, 7 May 1923, M. E. Jones s.n. (PO). 1941.

**Status:** Endemic, rare and threatened (Ripley, T).

**Distribution:** Juab (Cottam 7201 UT) and Washington counties, Utah (Hitchcock 1941).

**Type:** West of Willow Creek, on Thorne’s Ranch, eastern slope of Big Pack Mtn., Uintah Co., Utah, 23 May 1935, Graham 8950 (GH).

**Status:** Endemic, rare and endangered (Ripley, E).

**Distribution:** Uintah Co., Utah; known only from the type locality (Rollins 1938).

**Type:** Indian Creek Canyon, on white shale ridge tops, ca 4 miles southwest of Duchesne, Duchesne Co., Utah,

STATUS: Endemic, rare and endangered (Ripley, E).

DISTRIBUTION: Duchesne Co., Utah; known only from the type locality (Reveal 1967).

TYPE: Big Cottonwood Canyon, Salt Lake Co., Utah, 28 Jun 1908, Garrett 1344 (MO).

STATUS: Endemic, rare and possibly threatened (Ripley, T).

DISTRIBUTION: Salt Lake, Utah and Wasatch counties, Utah (Rollins & Shaw 1973).

TYPE: Frequent, limestone breaks, south side of Middle Fork Park, Wasatch Plateau, 10 Aug 1940, 10,800 feet, Maguire 20053 (UTC).  

STATUS: Endemic, locally common but restricted.

TYPE: Red Canyon, Garfield Co., Utah, 2,300 meters, 6 Jul 1912, Eggleston 8198 (NA, the type now transferred to us).

STATUS: Endemic, rare and threatened (Ripley, T).

DISTRIBUTION: Garfield, Kane, and Piute counties, Utah (Reveal 1970a; Rollins & Shaw 1973).

TYPE: Bare white shale knolls, 6.5 miles southeast of Cannonville, Kane Co., Utah, 12 Jun 1966, Barneby 14424 (NY).

STATUS: Endemic, rare and endangered.

DISTRIBUTION: Kane Co., Utah; known only from the type locality (Reveal 1970a).

Type: American Fork Canyon, Utah Co., Utah, 31 Jul 1880, M. E. Jones 1354 (NY).

STATUS: Endemic, rare to locally common.

DISTRIBUTION: Davis, Duchesne, Juab, Salt Lake, Summit, Toole, Uintah, Utah, Wasatch and Weber counties, Utah (Rollins & Shaw 1973).

STATUS: Endemic, rare and threatened (Ripley, T).

DISTRIBUTION: Crest of the Uinta Mts., Duchesne (Murdock 54 [BRY]) and Daggett-Uintah counties (Waite 252 and 297 [BRY]).

TYPE: Chandler Canyon, Uintah Co., Utah, 3 Aug 1935, 6,000 feet, Graham 9976 (US).

STATUS: Endemic, rare and possibly extinct (Ripley, PoEx).

DISTRIBUTION: Uintah Co., Utah; known only from the type collection as recent efforts to recollect this species have failed (Waite 1973).

STATUS: Local and infrequent.

DISTRIBUTION: Box Elder Co., Utah (UTC; Al-Shehbaz 1973); found to the west of Utah.

STATUS: Endemic, locally common, neither threatened nor endangered.

**Type:** Panguitch Lake, Garfield Co., Utah. 7 Sep 1894, M. E. Jones 6015c (us).

**Status:** Rare and restricted, possibly threatened.

Cactaceae

**Type:** Mojavean desert north of St. George, Washington Co., Utah, 5 May 1949, 2,900 feet, Benson 13637 (POM).

**Status:** Endemic, rare and endangered (Ripley, E).

**Distribution:** Washington Co., Utah; known only from the vicinity of the type locality (Benson 1969b).

**Status:** Restricted and endangered.

**Distribution:** Washington Co., Utah (brv); southern Nevada, Arizona and California (Benson 1969b).

**Status:** Restricted and rare, possibly threatened.

**Distribution:** Washington Co., Utah; southern Nevada, California, and Arizona (Benson 1969b).

**Status:** Rare, restricted and possibly threatened.

**Distribution:** Millard Co., Utah (brv); Nevada and Arizona (Benson 1957). This species includes those entities included in *Micropuntia* by Daston (1946).

**Status:** Restricted and rare.

**Distribution:** Washington Co., Utah, and adjacent Nevada and Arizona (Benson 1969b).

**Type:** Cottonwood Springs and Pipe Springs, supposedly from southern Utah but more likely from Arizona, 1883, *Siler s.n. (mo)*.

**Status:** Arizona Strip endemic, rare, local and endangered (Ripley, E).

**Distribution:** Washington Co., Utah (Welsh 12712 [brv]), and northern Arizona (brv; Benson 1969b).

**Status:** Rare, possibly extirpated from Utah (Ripley, E).

**Distribution:** Duchesne and Uintah counties, Utah, and Delta Co., Colorado (Benson 1966).

**Status:** Rare and threatened (Ripley, T).

**Distribution:** Box Elder, Beaver, and Sevier counties, Utah, and Elko Co., Nevada (Benson 1966).

**Type:** Southern Utah, 1888, *Siler s.n. (ph)*.

**Status:** Rare and now extirpated from Utah.

**Distribution:** Kane Co., Utah, and Coconino Co., Arizona (Benson 1969b).

Type: South of the Great Salt Lake Desert, 19 Jul 1859, H. Engelmann s.n. (MO).

Status: Rare to locally common, neither threatened nor endangered. (Ripley, T.)

Distribution: Widespread in much of the southern two-thirds of Utah.

Type: Near San Rafael Ridge, Emery Co., Utah, 5,000 feet, Benson & Benson 16595 (POM).

Status: Endemic, restricted and rare, endangered (Ripley, T).

Distribution: Emery and Wayne counties, Utah.

**Capparidaceae**

*Cleomella palmerana* M. E. Jones, Zoe 2: 236. 1891.

Type: Green River, Emery Co., Utah, 9 May 1890, M. E. Jones s.n. (POM).

Status: Endemic to the Navajo Basin of Utah and Colorado, edaphically restricted but neither threatened nor endangered.

Distribution: Duchesne, Emery, Garfield, Grand, Kane, and Wayne counties, Utah (BRY), and Colorado (Harrington 1954).

Status: Restricted and rare, possibly threatened.

Distribution: Iron Co., Utah (BRY), and Nevada (Shaw 1970).

**Caryophyllaceae**

Type: Cedar Breaks Rim, Iron Co., Utah, 23 Jun 1940, 10,400 feet, Maguire 19024 (UTC).

Status: Endemic, locally common, neither threatened nor endangered.

Distribution: Beaver, Garfield, Kane, Iron, and Wayne counties, Utah (Maguire 1947b).

Type: Skyline Drive, 1 mile above Baldy Ranger Station, Sanpete Co., Utah, 8 Aug 1940, 10,900 feet, Maguire 20000 (UTC).

Status: Endemic, locally common but possibly threatened (Ripley, T).

Distribution: Iron, Garfield and Sanpete counties, Utah (Maguire 1941; Hitchcock & Maguire 1951).

Type: Red Canyon, 5 miles east of U.S. Highway 89, Garfield Co., Utah, 16 Jul 1940, Maguire 19550 (UTC).

Status: Endemic, rare and threatened.

Distribution: Garfield Co., Utah; known only from the type area.

**Chenopodiaceae**

Type: Dry lake bed 1.5 miles northeast of Desert Range Experiment Station headquarters, Millard Co., 12 Jul 1961, Hanson 354 (BRY).

Status: Restricted, though locally abundant, possibly threatened.

Distribution: Juab and Millard counties, Utah (BRY), and Nevada (Hanson 1962b).

Type: Vicinity of Moab, Grand Co., Utah, 1 Jul 1911, Rydberg & Garrett 8465 (NY).

Status: Colorado River drainage, endemic, restricted but locally common.

Distribution: Garfield, Grand, Kane, and San Juan counties, Utah (BRY), and reported from Colorado (Harrington 1954).

Status: Restricted, rare and possibly threatened.

Distribution: San Juan Co., Utah;

---

Cited by Ripley (1975) as *S. spinosior* without author; we can find no indication that such a combination has been made. According to Benson (1966), this name is a synonym of *S. pubispinus* Engelm.; L. Benson var. *pubispinus*.
rather common in Arizona, New Mexico and Mexico (Hanson 1692b).

**Type:** 4 miles south of Cisco along Utah Highway 128, Grand Co., Utah, 5 Jul 1961, Hanson 322 (bry).

**Status:** Endemic, restricted and possibly threatened.

**Distribution:** Carbon and Grand counties, Utah (bry).

**Cucurbitaceae**

**Status:** Restricted, but locally common and often weedy, neither threatened nor endangered.

**Distribution:** San Juan (Welsh _et al._ 2992 [bry]), and Washington (bry) counties, Utah, and widespread elsewhere.

**Cuscutaceae**

**Type:** Vicinity of Powell, 15 miles west of Fillmore, Millard Co., Utah, 10 Sep 1957, on _Phyla cuneifolia_, Warner s.n. (UTC).

**Status:** Endemic, possibly extinct (Ripley, PoEx).

**Distribution:** Millard Co., Utah; known only from the type collection (Yuncker 1960, 1965).

**Cyperaceae**

**Status:** Rare and restricted to specialized habitats; threatened.

**Distribution:** San Juan Co., Utah (Welsh 12425 [bry]), and in Grand Canyon, Arizona (Stacey 1937).

**Status:** Rare, restricted and endangered.

**Distribution:** Kane (Welsh & Toft 11709; Welsh & Moore 11780; Welsh & Toft 11870 [bry]) and San Juan (Welsh & Toft 11871 [bry]), and from northern Arizona, southern Nevada, and southern California to Central America (Kearney & Peebles 1951).

**Elaeagnaceae**

**Status:** Restricted, local and possibly extirpated from Utah.

**Distribution:** Daggett (Julander 156 [bry]) and Summit (Welsh & Moore 6724 [bry]) counties, Utah; widespread northward to Alaska (Welsh 1974b).

**Ericaceae**

**Status:** Local, rare, possibly threatened.

**Distribution:** Washington Co., Utah (Higgins 665 and 3414 [bry]; Higgins 1972b).

**Euphorbiaceae**

**Type:** Lower Cottonwood Canyon, about 4 miles southeast of Cannonville. Kane Co., Utah, 12 Jun 1966, 4,500 feet, Barneby 14411 (NY).

**Status:** Endemic, restricted edaphically, threatened (Ripley, T).

**Distribution:** Emery, Kane, and Wayne counties, Utah (bry).

**Fabaceae**

_Astragalus adanus_ A. Nels., Bot. Gaz. 53: 222. 1912.

**Status:** Rare and possibly extirpated from Utah.

**Distribution:** Juab Co., Utah; widespread in Idaho (Barneby 1964).

**Status:** Restricted, rare and possibly threatened.

**Distribution:** Daggett Co., Utah (Hanson 283a [bry]); widespread east of the continental divide northward to Alaska (Welsh 1974b).
  Status: Rare and local, possibly threatened.
  Distribution: Grand (Holmgren et al. 2321 [BRY, NY, UTC]) and Salt Lake (UT, without collector) counties; widespread in North America and Eurasia (Welsh 1974b).

Astragalus ampullarius S. Wats., Amer. Naturalist 7: 300. 1873.
  Type: Kanab, Kane Co., Utah, 1872, Thompson s.n. (GH).
  Status: Arizona strip endemic, edaphically restricted and though locally common, probably threatened (Ripley, T).
  Distribution: Kane and Washington counties, Utah, and northernmost Coconino and Mohave counties, Arizona (BRY; Barneby 1964).

Astragalus asclepiadoides M. E. Jones, Zoe 2: 238. 1891.
  Type: Cisco, Grand Co., Utah, 21 Jun 1889, M. E. Jones s.n. (POM).
  Status: Edaphically restricted although locally common, neither threatened nor endangered.
  Distribution: Carbon, Duchesne, Emery, Garfield, Grand, Sanpete, Sevier (UT), Uintah, and Wayne counties, Utah (BRY, UTC), and western Colorado (Barneby 1964).

Astragalus australis Lam., Fl. Franç. 2: 637. 1778.
  Status: Possibly extirpated from Utah.
  Distribution: Piute (?) Co., Utah (Barneby 1964).

  Status: Rare, restricted and threatened (Ripley, T).
  Distribution: Garfield Co., Utah (BRY), and in Navajo and Coconino counties, Arizona (Barneby 1964).

This remarkable milkvetch is adequately distinct on account of size of flower and parts, and because of stature to segregate it from its near and mirror-imaged congener A. desperatus. The name change honors the author of the monumental “Atlas of North American Astragalus,” Rupert C. Barneby of the New York Botanical Garden.

  Status: Rare and endangered.
  Distribution: Wayne Co., Utah (BRY); widespread in Alaska, Canada, Colorado, Wyoming, and one record from Nebraska (Barneby 1964).

  Status: Rare and obscure, probably threatened.
  Distribution: Carbon, Emery, Garfield, Piute, and Wayne counties, Utah (BRY); also in Colorado, New Mexico, and Arizona (Barneby 1964).

  Status: Probably extirpated from Utah.
  Distribution: Kane Co., Utah, in Glen Canyon, the collection area inundated by Lake Powell; also in northern Arizona (Barneby 1964).

  Status: Rare and restricted, possibly threatened (Ripley, T).
  Distribution: Millard Co., Utah (BRY); otherwise known only from two locations in Nye Co., Nevada.

  Type: Southeast of Bicknell, Wayne Co., Utah, 10 Jun 1947, 7,600 feet, Ripley & Barneby 8605 (CAS).
  Status: Endemic, rare and obscure, possibly threatened.
  Distribution: Garfield, Piute, Sevier, and Wayne counties, Utah (Barneby 1964).

  Type: Ca 6 miles southeast of Jensen, Uintah Co., Utah, 7 Jun 1946, Ripley & Barneby 7797 (CAS).
  Status: Endemic, rare and threatened (Ripley, T).
  Distribution: Uintah Co., Utah (BRY, UTC).

Astragalus coltonii M. E. Jones, Zoe 2: 237. 1891.

Status: Rare and local, threatened (Ripley, T).

Astragalus cottamii Welsh, Rhodora 72: 189. 2070.

Type: In desert along west side of Comb Wash, 9 miles west of Bluff, San Juan Co., Utah, 27 May 1961, Cronquist 9123 (NY).

Status: Endemic and very restricted, endangered (Ripley, E).

Distribution: San Juan Co., Utah (BRY, UTC).

Type: In desert along west side of Comb Wash, 9 miles west of Bluff, San Juan Co., Utah, 16 Jun 1984, at 5,000 feet, M. E. Jones 5464j (POM).

Status: Endemic, locally common to abundant, neither threatened nor endangered.

Distribution: Carbon, Emery, Grand, and San Juan counties, Utah (BRY).

Type: Common on slopes near Indianola, 17 Jun 1909, Tidestrom 2249 (GH).

Status: Endemic and possibly extinct (Ripley, PrEx).

Distribution: Sanpete Co., Utah (Barneby 1964).

Type: Ca 4 miles above Theodore [Duchesne] on the Colton road, Duchesne Co., Utah, 11 May 1908, M. E. Jones s.n. (POM).

Status: Uinta Basin endemic, local and possibly endangered (Ripley, E).

Distribution: Duchesne and Uintah counties, Utah, and Rio Blanco Co., Colorado (BRY).

Status: Rare, disjunct and possibly extirpated from Utah.

Distribution: Juab and Tooele counties; also in southern Idaho where rare (Barneby 1964).

Type: Ca 13 miles below Theodore [Duchesne] toward Chepeta Well, Duchesne Co., Utah, 23 May 1908, M. E. Jones s.n. (POM).

Status: Endemic, restricted and threatened (Ripley, T).

Distribution: Duchesne and Uintah counties, Utah (BRY).

Astragalus castwoodae M. E. Jones, Zee 4: 368. 1894, based on A. preussii var. sulcatus M. E. Jones, Zee 4: 37. 1893.

Type: Westwater, Grand Co., Utah (incorrectly given as “Colorado”), 6 May 1891, M. E. Jones s.n. (POM).

Status: Rare, disjunct and possibly threatened.

Distribution: Emery, Grand, and San Juan counties, Utah; also in west central Colorado (Barneby 1964).

Status: Rare and endangered.

Distribution: Kane (Atwood 4629 [BRY]) Co., Utah; Arizona, New Mexico, Texas, and Mexico (Barneby 1964).

**Astragalus eucosmus** B. L. Robinson, Rhodora 10: 33. 1908.

**Status:** Possibly extirpated.

**Distribution:** Summit Co., Utah; widespread in northern North America (Barneby 1964; Welsh 1974b).

**Astragalus eurekensis** M. E. Jones, Contr. W. Bot. 8: 12. 1898.

**Type:** Eureka, Juab Co., Utah, 1891, M. E. Jones s.n. (POM).

**Status:** Endemic, locally common to abundant, neither threatened nor endangered.

**Distribution:** Juab, Iron, Millard, Sanpete, Tooele, and Utah counties, Utah (BRY; Barneby 1964).

**Type:** Green River, Emery Co., Utah, 7 May 1890, M. E. Jones s.n. (POM).

**Status:** Endemic, restricted edaphically but locally common, neither threatened nor endangered.

**Distribution:** Emery, Garfield, Grand, and Wayne counties, Utah (BRY).

**Status:** Rare or possibly extirpated from Utah.

**Distribution:** Summit Co., Utah (UTC); widespread east of the continental divide (Barneby 1964).

**Status:** Rare and local, possibly threatened.

**Distribution:** Garfield and Kane counties, Utah (BRY).

**Astragalus hamiltonii** C. I. Porter, Rhodora 54: 159. 1952.

**Type:** On the Wasatch formation 5 miles south of Vernal, Uintah Co., Utah, 24 May 1950, Hamilton & Beath s.n. (RM).

**Status:** Endemic, rare and local, endangered (Ripley, E).

**Distribution:** Uintah Co., Utah (BRY).

**Type:** Wash below the Natural Bridge, near Fruita, Wayne Co., Utah, 8 Jun 1961, Barneby 13131 (CAS).

**Status:** Endemic, rare and endangered (Ripley, E).

**Distribution:** Wayne Co., Utah; known only from the type area (BRY).

**Astragalus idanthus** S. Wats. in King, Rep. Geol. Explor. 40th Parallel 5: 70. 1871.

**Status:** Rare and possibly extirpated from Utah.

**Distribution:** Tooele Co., Utah; widespread to the west of Utah (Barneby 1964).

**Astragalus iselyi** Welsh, Great Basin Nat. 34: 305. 1974.

**Type:** Brumley Bridge, ca 1.5 miles north of Pack Creek Ranch, San Juan Co., Utah. 5 May 1971, Welsh 10970 (BRY).

**Status:** Endemic, edaphically restricted, endangered.

**Distribution:** Grand and San Juan counties, Utah (BRY; Welsh 1974a).

**Astragalus jejunus** S. Wats. in King, Rep. Geol. Explor. 40th Parallel 5: 73. 1871.

**Status:** Rare and restricted, possibly threatened.

**Distribution:** Rich Co., Utah (Barneby 1964); southwestern Wyoming and in an isolated location in White Pine Co., Nevada.

**Astragalus kentrophyta** A. Gray var. coloradoensis M. E. Jones, Contr. W. Bot. 10: 63. 1902.

**Status:** Navajo Basin endemic; rare to locally common but probably threatened.

**Distribution:** Garfield, Kane, San Juan, and Wayne counties, Utah (BRY), and adjacent northern Arizona (Barneby 1964).

**Status:** Rare and local in generalized
habitats; possibly threatened (Ripley, T).

**Distribution:** Kane (bry) and Washington counties, Utah and in Coconino and Mohave counties, Arizona (bry; Barneby 1964).

**Type:** Ephraim, Sanpete Co., Utah, 13 Jul 1894, 6,000 feet, *M. E. Jones 5627m* (POM).

**Status:** Rare and local, possibly threatened (Ripley, PoEx, Tax?).

**Distribution:** Daggett, Juab, Sanpete, Sevier, Summit, and Tooele counties, Utah, and widespread from Colorado, Wyoming, Idaho, Oregon, California, and Nevada (Schoener 1975).

**Status:** Rare and ephemeral, possibly threatened.

**Distribution:** Washington Co., Utah (bry; Schoener 1974); widespread in southern Nevada and adjacent California (Barneby 1964).

**Status:** Rare and local; possibly threatened.

**Distribution:** Juab Co., Utah (Schoener 1975), and Nevada (Barneby 1964).

**Type:** Southern Utah, 1870, *Palmer s.n.* (NY).

**Status:** Locally common, restricted, neither threatened nor endangered.

**Type:** Bear Valley, in south central Utah, 1877, *Palmer s.n.* (GH).

**Status:** Endemic, possibly extinct.

**Distribution:** Iron (or possibly Sevier) Co., Utah; perhaps the specimens are mislabeled.

**Status:** Endemic, rare and restricted; threatened.

**Distribution:** Iron and Kane (bry) counties, Utah (Barneby 1964).

**Type:** Canyon east of Glenwood, Sevier Co., Utah, 1875, *Ward 223* (GH).

**Status:** Endemic, rare and threatened (Ripley, E).

**Distribution:** Garfield, Piute, Sevier and Wayne counties, Utah (bry).

**Type:** White River, Uintah Co., Utah, 25 May 1958, 5,200 feet, *M. E. Jones s.n.* (POM).

**Status:** Uinta Basin endemic, rare and edaphically restricted; endangered (Ripley, E).

**Distribution:** Uintah Co., Utah, and Rio Blanco Co. Colorado (Barneby 1964).

**Type:** Northeast slope of Kaiparowits Plateau, south of Willow Tank, Kane Co., Utah, 9 May 1939, *Harrison 9069* (US).

---

5Schoener (1975) has determined that this name includes var. *platyphyllidius* (Rydb.) M. E. Peck, and therefore defines the taxon differently from Ripley (1975).

6This variety was reduced to synonymy under var. *palus* (M. E. Jones; M. E. Jones by Schoener (1975), but that taxon is currently known only from the valleys of the Colorado and Virgin rivers. The exact location of "Bear Valley" has not been determined (McVaugh 1956).
Status: Endemic, restricted though locally common; threatened (Ripley, E).

Distribution: Kane Co., Utah (bry).

Type: Ca 5 miles south of Veyo, Washington Co., Utah. 4,900 feet, Ripley & Barneby 4951 (cas).

Status: Endemic (?), locally common in disjunct populations, possibly threatened (Ripley, E).

Distribution: Washington Co., Utah (bry), and possibly in Mohave Co., Arizona.

*Astragalus monumental|is* Barneby, Leafl. W. Bot. 7: 35. 1953.

Status: Endemic, rare and restricted edaphically, possibly threatened.

Distribution: Garfield and San Juan counties, Utah (bry).

Type: San Rafael Swell, Emery (?) Co., Utah. 12 May 1914. M. E. Jones s.n. (pom).

Status: Endemic, rare to common, neither threatened nor endangered.

Distribution: Carbon, Emery, Garfield, Grand, and Wayne counties, Utah (bry).

Type: Near the head of White Canyon, 2 miles below the Kachina Bridge of Natural Bridges N.M., Barneby 12778 (cas).

Status: Endemic, restricted and local, disjunct in several main locations, neither threatened nor endangered. (Ripley, T).

Distribution: Garfield, San Juan, and Wayne counties, Utah (bry).

Status: Rare and threatened (Ripley, T).

Distribution: Iron Co., Utah (bry), and adjacent Nevada (Barneby 1964).

Type: Cedar Mtn., Emery Co., Utah, 20 May 1915, M. E. Jones s.n. (ny).

Status: Endemic, restricted though locally common, neither threatened nor endangered (Ripley, E).

Distribution: Emery, Garfield, and Wayne counties, Utah (bry).

Type: Mountains north of Bullion Creek, near Marysvale, Piute Co., Utah, 23 Jul 1905, Rydberg & Carlton 7104 (ny).

Status: Endemic and threatened (Ripley, PoEx).

Distribution: Piute (Barneby 1964) and Garfield (bry) counties, Utah.

Type: Frisco, Beaver Co., Utah, 22 Jun 1880, ca 8,000 feet, M. E. Jones s.n. (pom).

Status: Rare and possibly extirpated.

Distribution: Beaver and Juab counties, Utah, and in east central Nevada (Barneby 1964).

Status: Rare and local, both edaphically and altitudinally restricted.

Distribution: Western Beaver (bry) and Tooele counties, Utah, and much of Nevada and adjacent California (Barneby 1964).

*Astragalus rafae|el|ensis* M. E. Jones, Rev. Astrag. 146. 1923.

Status: Endemic, restricted edaphically, threatened (Ripley, T).

Distribution: San Rafael Swell, Emery Co., Utah (bry).

*This species, previously known only from the type collection, was rediscovered in 1975; one of many species thought to be extinct but found during 1973 as a result of the interest generated by the Smithsonian Report.*
Astragalus sabulosus M. E. Jones, Zoe 2: 239. 1891.
   Type: Cisco, Grand Co., Utah, 2 May 1890, M. E. Jones s.n. (POM).
   Status: Endemic, rare and edaphically restricted; threatened.
   Distribution: Grand Co., Utah (BRY; Welsh 1974a).

   Type: Dinosaur N.M., 6 miles north of Jensen, Uintah Co., Utah, 26 Jun 1953, Holmgren & Tillett 9527 (NY).
   Status: Endemic, rare and edaphically restricted; threatened (Ripley, E).
   Distribution: Uintah Co., Utah (BRY, UTC).

   Status: Endemic, local and periodically abundant in disjunct populations, neither threatened nor endangered (Ripley, E).
   Distribution: Garfield, Piute and Wayne counties, Utah (BRY).

   Status: Endemic, rare and local; threatened.
   Distribution: Garfield Co., Utah; known only from the type area (BRY).

   Type: Above Springdale, Washington Co., Utah, 25 Sep 1894, 4,000 feet, M. E. Jones 6080k (POM).
   Status: Rare and edaphically restricted; endangered (Ripley, T).
   Distribution: Kane and Washington counties, Utah, and Coconino Co., Arizona (BRY).

A main locality of distribution for this plant is the Coral Pink Dunes region where the plants grow in the interdune valleys. The use of that region for recreation possibly spells the doom of this plant in that section.

   Status: Rare and possibly extirpated from Utah.

   Status: Restricted but locally common to abundant, possibly threatened.
   Distribution: Beaver, Iron, Kane, and Washington counties, Utah (BRY); also in northwestern Arizona (BRY), Nevada, and Oregon (Barney 1964).

   Type: On the edge of the Aquarius Plateau, Sevier Co., Utah, 1875, 8,700 feet, Ward 424 (GH).
   Status: Endemic, local and disjunct, neither threatened nor endangered.
   Distribution: Garfield, Kane, Piute, and Sevier counties, Utah (BRY).

Astragalus wetherillii M. E. Jones, Zoe 4: 34. 1893.
   Status: Possible extirpated from Utah (Ripley, T).

Astragalus woodruffii M. E. Jones, Rev. Astrag. 77. 1923.
   Type: On the sandy foot of the San Rafael Swell, Emery (?) Co., Utah, 17-18 May 1914, M. E. Jones s.n. (POM).
   Status: Endemic, Local and edaphically restricted, possibly threatened.
   Distribution: Emery, Wayne, and possibly Garfield counties, Utah (BRY).

   Type: Ca 10 miles east of Halls Crossing, San Juan Co., Utah, 30 Apr 1966, Welsh 5205 (BRY).
   Status: Endemic, restricted and rare, and possibly threatened.
   Distribution: San Juan Co., Utah (BRY); known only from the type locality.
Hedysarum boreale Nutt. var. gremiale

Type: West of Vernal, Uintah Co., Utah, 16 Jun 1937, Rollins 1733 (GH).

Status: Endemic, local and restricted, possibly threatened.

Distribution: Duchesne and Uintah counties, Utah (bry).

Type: Court House Wash, near where it comes into the Grand [Colorado] River, near Moab, Grand Co., Utah, 26 May 1892, Eastwood s.n. (CAS).

Status: Endemic, edaphically restricted but locally common, neither threatened nor endangered, but apparently extirpated from the type area (Harrison et al. 1964).

Distribution: Emery (bry), Grand, and Wayne (bry) counties, Utah.

Lathyrus brachycalyx Rydb. ssp. zionis

Type: Ten miles east of the east entrance of Zion N.P., Kane (?) Co., Utah, 30 May 1949, Hitchcock 19013 (WTU).

Status: Rare to locally abundant in disjunct populations, neither threatened nor endangered.

Distribution: Grand, Kane, San Juan, and Washington counties, Utah, and Coconino Co., Arizona (bry); reportedly more widespread in Arizona (McDougall 1973).

Type: Southern Utah, possibly Washington Co., Utah, 1877, Palmer 94 (US).

Status: Endemic (?), restricted but locally abundant, neither threatened nor endangered.

Distribution: Kane and Washington counties, Utah (bry; Ottley 1944).

Status: Endemic, rare and threatened.

Type: Along Bullion Creek above Marysvale, Piute Co., Utah, 21 Jul 1905, Rydberg & Carlton 7024 (NY).

Status: Endemic, restricted and threatened (Ripley, T).

Distribution: Piute Co., Utah (bry).

Type: Red Canyon, Garfield Co., Utah, 7 Jun 1947, 7,150 feet, Ripley & Barneby 8550 (CAS).

Status: Endemic, edaphically restricted and threatened.

Distribution: Emery (us), Garfield (bry), Iron (bry, us) and Uintah (bry, ny, utc) counties, Utah.

Status: Rare and local, possibly endangered.

Distribution: Daggett Co., Utah, and in Wyoming and Colorado (Barneby 1952).

Status: Rare and local, possibly threatened (Ripley, E).

Distribution: Daggett Co., Utah; also in Wyoming and Colorado (bry).

Type: Kanab, Kane Co., Utah, 1872, Thompson s.n. (GH).

Status: Restricted in disjunct populations, neither threatened nor endangered (Ripley, T).

Distribution: Emery, Grand, Kane, San Juan, and Washington counties, Utah; Mohave Co., Arizona, Nevada, and Idaho (bry; Porter 1956).

Type: Near Beaver City, Beaver Co., Utah. 1877, Palmer 96 (GH).

Status: Unknown from Utah in contemporary collection, although a specimen without collector or date labeled Ps. castoria is on file at UT; either extirpated from the state, or, and more likely, never from Utah.

Distribution: Arizona and adjacent southern California (Kearney & Peebles 1951; Munz & Keck 1959).

Type: Ca 17 miles east of Kanab toward Jepson Springs, Kane Co., Utah, 6 Jun 1942, Ripley & Barneby 4832 (CAS).

Status: Mohave corridor endemic, rare and endangered (Ripley, T).

Distribution: Kane Co., Utah, and adjacent Coconino Co., Arizona (Barneby 1943).

Type: Epsom Creek, San Juan Co., Utah, 13 Jul 1895, Eastwood 21 (CAS).

Status: Navajo Basin endemic, edaphically restricted but abundant to common, neither threatened nor endangered.

Distribution: Garfield, Kane, and San Juan counties, Utah (BRY), and Coconino Co., Arizona.

Type: Proposed dam site near Wilson Mesa, Grand Co., Utah, 1 Jul 1911, Rydberg & Garrett 8367 (NY).

Status: Endemic, locally common and neither threatened nor endangered.

Distribution: Garfield, Grand, Kane, San Juan and Wayne counties, Utah (Toft & Welsh 1972).

Psoralea parensis Welsh & Atwood, spec. nov. P. megalanthis Wooton & Standley proxime affinis sed floribus brevioribus et venas supra valde albo-strigosas.

Plantae habentes caudices bene-evoluti et radices tuberosae, 2-8 cm altae; caules 0.5-3 (4.5) cm longi, internodiis 1-3 elongatis, strigosi; stipulae 4-7 (10) mm longae, ovatae vel obovatae, strigosa; foliola 3.5, 9-23 (25) mm longa, 7-22 mm lata, obovata vel orbicularia, cuneata, rotundata ad truncata vel emarginata apicaliter, utrinque glandulifera; petioli 1.3-6.3 (7) cm longi, strigosi, pilis appressivels adscendentibus; pedunculi 0.5-2.2 (2.8) cm longi, pilis appressiss vel adscendentibus; bracteae 4-6 (8) mm longae, ovatae vel obovatae, acuminatae abrupte, pilosa rigide; pedicelli (1) 2.3-8 mm longi, pilis adscendentibus; calyces plus minusve gibbosi basim, tubus 3.3-4 (4.6) mm longus, dentes inaequales, infinis 5.3-6.8 mm longis, circa duplo latoribus quam lateralis; corolla 8.8-10.5 (12) mm longa, dente infimo calycis leviter longioribus; alae vexillo subaequalibus, purpureo-maculatae ad apicem; fructus usque ad 9 mm longum et seminum usque ad 5.2 mm longum.

Type: UTAH: Garfield Co.: Bryce Canyon National Park, in ponderosa pine woods, as ground layer, at ca 8,000 feet elevation, 26 Jun 1975, Welsh & Murdoch 12859. Holotype, BRY. Isotypes to be distributed.

Additional specimens examined: UTAH: Garfield Co.: East Creek, 3 miles south of Inspiration Point, Bryce Canyon N.P., in black sagebrush area, 11 Jun 1970, Buchanan 1494 (BRY, WSNC); Paria View, Bryce Canyon N.P., in open ponderosa pine woods, ca 8,000 feet elevation, 12 Jun 1975, S. L. & S. L. Welsh 12810 (BRY); East Creek, 9 Jun 1931, Weight B-31/6-305 (BCNP, US). Kane Co.: Hackberry Canyon in Cottonwood Wash, ca 10 miles north of U.S. Highway 89, sec. 31, T. 40S., R. 1W., 26 Apr 1972, Atwood 3684 (BRY).

Status: Endemic, rare and threatened.

Distribution: Kane and Garfield counties, Utah.

It seems likely that Palmer mislabeled the type material, and that it was in reality from 'Beaverdam,' Mohave Co., Arizona. The species is not known from Utah.

**Type:** Kanab, Kane Co., Utah, or possibly Mohave Co., Arizona, 1872, Thompson s.n. (ny).

**Status:** Endemic (?); restricted but locally common and neither threatened nor endangered.

**Distribution:** Emery, Garfield, Kane, San Juan, and Wayne counties, Utah (bry) and personal observations.

**Status:** Restricted and rare, possibly threatened.

**Distribution:** Garfield (UT) and Washington counties, Utah (bry); widespread elsewhere.

Gentianaceae

**Type:** Panguitch Lake, Garfield Co., Utah, 7 Sep 1894, 8,400 feet, M. E. Jones 6008 (pom).

**Status:** Restricted but locally common, neither threatened nor endangered.

**Distribution:** Garfield, Iron, Kane, Sanpete counties, Utah (bry), and Clark Co., Nevada (Gillett 1957).

Geraniaceae

**Type:** Aquarius Plateau at the head of Poison Creek, Garfield Co., Utah, 4 Aug 1905, Rydberg & Carlton 7401 (ny).

**Status:** Endemic, restricted and possibly threatened (Ripley, T).

**Distribution:** Garfield, Sevier, and Wayne counties, Utah (Nebeker 1974).

Hydrophyllaceae

**Status:** Restricted and rare, possibly threatened.

**Distribution:** San Juan Co., Utah (UT, UTC); widespread from Washington and Oregon to Wyoming, Colorado and New Mexico, with var. *fendleri* restricted to the Rocky Mountain area (Constance 1942).

**Status:** Restricted and local, possibly threatened (Ripley, T).

**Distribution:** Garfield, Grand, and Kane counties, Utah (bry), and northeastern Arizona (Atwood, in press).

**Status:** Restricted and local, possibly threatened.

**Distribution:** Weber Co., Utah; widespread in Idaho, Nevada, California, Oregon, and Washington (Atwood, in press).

**Status:** Restricted and local; threatened (Ripley, T).

**Distribution:** Washington Co., Utah (bry); southern Nevada and adjacent California (Atwood, in press).

**Type:** Clear Creek, in Spanish Fork Canyon along the railroad on the east side of U.S. Highway 50-6, Utah Co., Utah, Atwood et al. 3091 (bry).

**Status:** Endemic, rare and endangered (Ripley, E.).

**Type:** Valley of the Virgin River, Washington Co., Utah, May 1874, *Parry 179* (GH).

**Status:** Restricted and local, possibly threatened (Ripley, T).

**Distribution:** Kane and Washington counties, Utah, and Mohave and Navajo counties, Arizona (Atwood, in press).

**Status:** Edaphically restricted and local; threatened (Ripley, T).

**Distribution:** Emery, Garfield, Kane, and San Juan counties, Utah, and Mohave Co., Arizona (Atwood 1975, in press).

**Phacelia crenulata** Torr. ex Wats. in King var. *angustifolia* Atwood, Great Basin Nat. 35: 158. 1975.

**Status:** Restricted and in disjunct populations, neither threatened nor endangered.

**Distribution:** Beaver, Garfield, and Kane counties, Utah, and in Coconino and Mohave counties, Arizona (Atwood 1975, in press).

**Type:** Marysvale, Piute Co., Utah, 4 Jun 1894, *M. E. Jones 5388a* (POM).

**Status:** Endemic, restricted and possibly threatened (Ripley, T).

**Distribution:** Piute, Sevier, and Wayne counties, Utah (Atwood, in press).

**Type:** Ca 0.4 miles north of Bluff along Utah Highway 163, San Juan Co., Utah, 13 May 1970, *Atwood 2454* (BRY).

**Status:** Endemic, restricted but locally abundant, neither threatened nor endangered.

**Distribution:** Grand and San Juan counties, Utah (BRY; Atwood 1975, in press).

**Type:** Bluff, San Juan Co., Utah, 24 May 1919, *M. E. Jones s.n.* (CAS).

**Status:** Endemic, rare and endangered (Ripley, T).

**Distribution:** Wayne and San Juan counties, Utah (Atwood, in press).

**Type:** Ca 6 miles east of Glen Canyon City, along the road to Warm Creek, Kane Co., Utah, 6 May 1970, *Welsh & Atwood 9809* (BRY).

**Status:** Endemic, edaphically restricted and endangered (Ripley, E).

**Distribution:** Garfield and Kane counties, Utah (Atwood 1975, in press).

**Phacelia rafaelensis** Atwood, Rhodora 74: 454. 1972.

**Type:** Capitol Reef N.M., Wayne Co., Utah, 12 Jun 1969, *Atwood & Higgins 1834* (BRY).

**Status:** Restricted and local, threatened (Ripley, T).

**Type:** Deep Creek Valley, above Furber, Tooele Co., Utah, 8 Jun 1891, *M. E. Jones s.n.* (POM).

**Status:** Rare and possibly extirpated from Utah.

**Distribution:** Tooele Co., Utah, and adjacent Nevada and southern Wyoming (Atwood, in press).

**Status:** Rare and possibly threatened.

**Distribution:** Weber Co., Utah (Arnow 3985 [BRY, UT]); also in Nevada, California and Oregon (Howell 1944).

Type: Gunnison, Sanpete Co., Utah, 7 Jun 1910, M. E. Jones s.n. (POM).
Status: Endemic, edaphically restricted and threatened (Ripley, 'T').
Distribution: Carbon (UT), Sanpete, and Sevier counties, Utah (Atwood 1975, in press).

Juncaceae

Status: Restricted, rare and possibly threatened.
Distribution: Salt Lake and Washington counties, Utah, and in California (Hermann 1948).

Lamiaceae

Status: Restricted, rare and possibly endangered.
Distribution: Near Orderville, Kane Co., Utah (bry); Barneby 1944), northern New Mexico and Arizona.

Liliaceae

Type: About St. George, Washington Co., Utah, Palmer s.n. (MO).
Status: Restricted and rare except locally; commercially exploited and possibly endangered. Our plant is var. utahensis.
Distribution: Washington Co., Utah (bry); also in Coconino and Mohave counties, Arizona (Breitung 1960).

Type: Southwest part of Howell Valley, sec. 7, T.11N., R.5W., Box Elder Co., Utah, 13 Jun 1960, 4,800 feet, Holmgren et al. 13125 (NY).
Status: Endemic, rare and endangered (Ripley, E.).
Distribution: Box Elder Co., Utah; known only from the type locality (Holmgren & Holmgren 1974).

Type: Green River, Emery Co., Utah, 9 May 1890, M. E. Jones s.n. (POM).
Status: Navajo Basin endemic, edaphically restricted but locally common to abundant and neither threatened nor endangered.
Distribution: Emery, Garfield, Grand, Kane, San Juan, and Wayne counties, Utah, and Apache and Navajo counties, Arizona (MacDougall 1973).

Status: Apparently extirpated from Utah; last seen in Zion N.P. in 1925 (Cottam 1974).
Distribution: Washington Co., Utah, to northern Mexico, eastward to western Texas.
This plant has mistakenly been called Nolina parryi (Kearney & Peebles 1951) or N. bigelovii (Cottam 1974).

Status: Restricted but locally abundant; possibly threatened by commercial exploitation.

Type: Three Garden, ca 1 mile north of the confluence of San Juan and Colorado rivers, Lake Powell, San Juan Co., Utah, 4 Jun 1973, Welsh 11935a (BRY).
Status: Endemic, local and uncommon; possibly threatened.
Distribution: Kane and San Juan counties, Utah (BRY); much of the known range of this entity has been inundated by the water of Lake Powell.

Type: Armstrong Canyon, near the Natural Bridges, San Juan Co., Utah, 4-6 Aug 1911, Rydberg & Garrett 9407 (NY).
Status: Endemic, restricted and possibly endangered.
Distribution: Grand, Kane, and San Juan counties, Utah (bry).

This distinctive species was placed in synonymy under the Mexican species, Zigadenus volcanicus Benth., Pl. Hartwegianus 96. 1840, by Tidestrom (1925), Tidestrom and Kittell (1941), and followed by Holmgren and Reveal (1967). This plant is related to Z. elegans Pursh, but differs in having an elongated paniculate inflorescence and smaller white to greenish flowers borne in the late summer and early fall.

**Loasaceae**

*Type:* Vermillion, Sevier Co., Utah, 16 Jul 1894, 5,600 feet, *M. E. Jones 5631* (Mo).

*Status:* Endemic, edaphically restricted and threatened.

**Distribution:** Sevier Co., Utah (bry).

*Status:* Local and infrequent.

**Distribution:** Washington Co., Utah; southern Nevada and western Arizona westward to California and Baja California, Mexico.

*Type:* St. George, Washington Co., Utah, “within a stone’s throw of the great Mormon Temple” (see Parry 1875), 1874, *Parry 75* (GH).

*Status:* Rare and possibly endangered.

**Distribution:** Washington Co., Utah (bry), northern Arizona and southern Nevada (Davis & Thompson 1967).

**Loganiaceae**

*Type:* Near St. George, Washington Co., Utah, 1877, *Palmer s.n. (us).*

*Status:* Restricted, rare and possibly threatened.

**Distribution:** Washington Co., Utah; also in northwestern Arizona, southern Nevada and southeastern California (Munz 1974).

**Loranthaceae**

*Status:* Restricted but locally abundant; neither threatened nor endangered.

**Distribution:** Washington Co., Utah; widespread in Arizona, Nevada, southern California, and northern Mexico (Kearney & Peebles 1951).

**Malvaceae**

*Type:* Wah Wah, Beaver Co., Utah, 1906, 6,000 feet, *M. E. Jones s.n. (pom).*

*Status:* Endemic, rare and threatened.

**Distribution:** Beaver and Millard counties, Utah (bry; Jefferies 1972).

**Martyniaceae**

*Status:* Restricted and uncommon, but neither rare nor endangered.

**Distribution:** Washington Co., Utah (bry); widespread in the southwestern states and elsewhere.

**Najadaceae**

*Type:* Common in shallow water, Pelican Point, Fish Lake, Sevier Co., Utah, 3 Aug 1940, 8,600 feet, *Maguire 19888* (ny).

*Status:* Endemic and endangered.

**Distribution:** Sevier Co., Utah; known only from the type area (Maguire & Jensen 1942).

*Status:* Rare and restricted.

**Distribution:** Cache Co., Utah (utc; Maguire & Jensen 1942); widespread elsewhere.
NYCTAGINACEAE

Status: Local, rare and highly restricted; possibly threatened.

Distribution: Kane Co., Utah (Atwood 3389 [BRY, WTS]).

Hermodium alipes S. Wats. var. pallidum C. L. Porter, Rhodora 54: 158. 1952.

Type: Ca 5 miles south of Vernal, Uintah Co., Utah, 3 Jun 1950, 5,200 feet, Porter 5308 (RM).

Status: Endemic, rare and endangered.

OLEACEAE

Menodora scabra A. Gray, Amer. J. Sci. Arts II, 14: 44. 1852.

Status: Rare, in disjunct populations, and possibly threatened.

Distribution: Garfield and Washington counties, Utah (BRY); widespread in the southwestern states and northern Mexico (Kearney & Peebles 1951).

ONAGRACEAE

Status: Rare and threatened (Ripley, T).

Oenothera brevipes A. Gray var. pallidula Munz, Amer. J. Bot. 15: 229. 1928.

Status: Restricted and local, possibly threatened.

Distribution: Washington Co., Utah (BRY); also in northwestern Arizona, southern Nevada and southern California (Raven 1969).

Status: Restricted and rare, possibly threatened.

Status: Restricted and rare, endangered (Ripley, E).

Distribution: Kane Co., Utah (BRY), and Nye Co., Utah (Raven 1969; Bealey 1973).

Type: Near St. George, Washington Co., Utah, 1874, Parry 72 (GH).

Status: Restricted but locally abundant (Ripley, T).

OPHIOGLOSSACEAE

Status: Rare; possibly threatened.

Distribution: Summit Co., Utah according to Flowers 1944; not reported from Utah by Cronquist et al. 1972); widespread in northwestern America.

Status: Rare; possibly threatened.

Distribution: Juab Co., Utah (Flowers 1944; Maguire & Holmgren 1946); widely distributed in northern North America (Welsh 1974b).

Status: Rare; possibly threatened.
DISTRIBUTION: Salt Lake Co., Utah (Flowers 1944; not reported by Cronquist et al. 1972 as, in their opinion, Flowers' identification was in error); also in Colorado.

**Orchidaceae**

- Status: Extirpated or endangered.
- Distribution: Cache (UTC) and Utah (BRY) counties, Utah; widespread in northern North America.

- Status: Rare and endangered.
- Distribution: Salt Lake (BRY) and Summit (Tidestrom 1925) counties, Utah; widespread and rare in Washington, California, Idaho, Montana, Wyoming, and Colorado.

- Status: Extirpated from Utah.
- Distribution: Salt Lake Co., Utah (M. E. Jones 1908 [POM]); widespread in the eastern United States (Correll 1950).

**Papaveraceae**

- Status: Rare and restricted.
- Distribution: Duchesne Co., Utah (BRY); widespread in northern North America, circumboreal (Welsh 1974b).

- Status: Restricted and rare, endangered (Ripley, E).

**Pinaceae**

- Status: Restricted but hardly rare; possibly threatened.

**Poaceae**

- Status: Rare and possibly extirpated from Utah, previously known only along Lake Powell.
- Distribution: Kane and San Juan counties, Utah (BRY); widely distributed in southern and southeastern United States, West Indies, Yucatan and Central America.

- Status: Rare and local.
- Distribution: Beaver, Millard, and Tooele counties, Utah, and adjacent Nevada (BRY).

*Festuca dasyclada* Hackel ex Beal, Grasses N. Amer. 2: 602. 1896.

- Type: Joe’s Valley, Emery Co., Utah, 1875, *Parry s.n.* (US).
- Status: Endemic and possibly endangered (Ripley, PoEx).
- Distribution: Emery and Sanpete counties, Utah (N. H. Holmgren, personal communication), and Colorado (N. West, personal communication).

- Status: Rare and restricted.
- Distribution: Southeastern Utah (Hitchcock & Chase 1950).

- Status: Rare and endangered.
- Distribution: Utah (Hitchcock &
Chase 1950); also in Colorado and New Mexico.

**Status:** Rare, restricted and endangered or possibly extirpated from Utah.

**Distribution:** San Juan Co., Utah ([BRY]); California, Nevada, and Mexico (Hitchcock & Chase 1950).

The known localities in Utah where this grass occurred have been inundated by Lake Powell.

**Status:** Rare and local.

**Distribution:** Garfield ([BRY]), Kane ([BRY]), San Juan ([UTC]), and Washington ([UTC]) counties, Utah; New Mexico and California (Cottam et al. 1940).

**Type:** Between Kanab and Carmel, Kane Co., Utah, M. E. Jones 6047 ([US]).

**Status:** Restricted and local, possibly threatened.

**Distribution:** Garfield, Kane, San Juan, and Washington ([UTC]) counties, Utah ([BRY, UTC]); southern Nevada and northern Arizona (Hitchcock & Chase 1950).

**Status:** Local and rare.

**Distribution:** Washington Co., Utah ([Atwood & Higgins 5528 [BRY]]).

**Status:** Rare and local.

**Distribution:** Utah (Hitchcock & Chase 1950); Arizona, Colorado, Oklahoma, New Mexico, and northern Mexico.

**Status:** Rare and possibly threatened.

**Distribution:** Weber Co., Utah (Arnow 3986 [BRY]); also in California (Hitchcock & Chase 1950).

**Status:** Rare and possibly threatened.

**Distribution:** San Juan Co., Utah ([BRY]); New Mexico, Arizona, Texas and northern Mexico (Hitchcock & Chase 1950).

**POLEMONIACEAE**

**Type:** Rabbit Valley on barren cliffs of sandstone, Wayne Co., Utah, 1875, 7,000 feet, Ward s.n. ([GH]).

**Status:** Endemic, rare and endangered (Ripley, E.).

**Distribution:** Wayne Co., Utah ([BRY, UTC]).

**Type:** Valley of the Virgin, near St. George, Washington Co., Utah, 1874, Parry 188 ([GH]).

**Status:** Rare and local; possibly threatened.

**Distribution:** Kane, Wayne, and Washington counties, Utah ([BRY]); Arizona, southern Nevada and southern California (Matthews 1971).

**Type:** Marysvale, Piute Co., Utah, 7,000 feet, M. E. Jones 5378 ([PO]).

**Status:** Endemic, rare and local; threatened (Ripley, T.).

**Distribution:** Piute, Sevier, and Uintah counties, Utah ([BRY]).

**Type:** In a clear forest, Uinta Mts., Duchesne or Uintah counties, Utah, 1844, Frémont s.n. ([GH]).

**Status:** Endemic, locally common and neither threatened nor endangered.

**Distribution:** Carbon ([UTC]), Emery, Duchesne and Uintah counties, Utah ([BRY, UTC]).

**Status:** Rare and local; possibly threatened (Ripley, T.).

**Distribution:** San Juan Co., Utah ([BRY]), and northern Arizona (Kearney & Peebles 1951).

Type: Cedar City, Iron Co., Utah, 11 May 1894, 6,500 feet, M. E. Jones 5208c (POM).

Status: Rare and local; possibly threatened (Ripley, T).

Distribution: Garfield, Iron, and Washington counties, Utah (BRY), and adjacent Nevada.

Phlox grahamii Wherry, Brittonia 5: 63. 1943.

Type: Talus slopes on west side of Green River, south of the mouth of San Wash. Uintah Co., Utah, 27 May 1933, Graham 7884 (CM).

Status: Endemic, rare and local; threatened (Ripley, T).

Distribution: Uintah Co., Utah; known only from the type locality (Wherry 1955).

Polygonaceae

Type: Ca 1.3 miles northwest of Ibex Warm Point, on a dry sandy flat, Millard Co., Utah, 4 Aug 1970, 5,270 feet, Holmgren & Holmgren 4650 (US).

Status: Endemic, rare and local; endangered (Ripley, E).

Distribution: Millard Co., Utah (BRY, DERM, UTC).

Type: Bare limestone gravel benches in the foothills of the Escalante Range at Widtsoe, Garfield Co., Utah, 8 Jun 1947, 7,750 feet, Ripley & Barneby 8570 (CAS).

Status: Endemic, edaphically restricted and endangered (Ripley, E).

Distribution: Garfield Co., Utah (BRY, UT, UTC).

Type: Price, Carbon Co., Utah, 29 Jun 1898, M. E. Jones s.n. (POM).

Status: Restricted and local, neither threatened nor endangered.

Type: Canyons in bottoms of the slopes of West Mtn., Utah Co., Utah, 20 Aug 1925, Cottam 411 (BRY).

Status: Endemic, restricted and rare.

Distribution: Juab, Millard, and Utah counties, Utah (BRY, NY, UTC).

Type: American Fork Canyon, Utah Co., Utah, 27 Jul 1880, M. E. Jones 1877 (POM).

Status: Endemic, restricted and rare.

Distribution: Davis, Juab, Millard, Salt Lake, Utah, and Weber counties, Utah (BRY, DS, GH, UT, UTC).

Type: Barton Range, San Juan Co., Utah, 13 Jul 1895, Eastwood 132 (NY).

Status: Rare and highly restricted; threatened (Ripley, T).

Distribution: San Juan Co., Utah (BRY, UTC), and Montezuma Co., Colorado (CS).

Status: Infrequent but neither threatened nor endangered.

Distribution: Grand Valley endemic in Grand Co., Utah (BRY, UTC), and Garfield and Mesa counties, Colorado.
Eriogonum corymbosum Benth. in DC. var. davidsei Reveal, Great Basin Nat. 27: 216. 1968.  
**Type:** Ca 0.7 miles south of U.S. Highway 50-6 at Wellington, just south of the Price River bridge, 9 Sep 1967, Reveal & Davidse 956 (UTC).  
**Status:** Endemic, restricted and local; endangered (Ripley, E).  
**Distribution:** Garfield Co., Utah; known only from the type locality (Bry. NY, UTC).  

**Status:** Restricted and rare; possibly threatened.  
**Distribution:** Box Elder and Tooele counties, Utah; northeastern Nevada and southern Idaho (Reveal 1973a).  

**Type:** Ca 10 miles south of Bonanza along Utah Highway 45 south of the White River, 25 Jul 1965, Holmgren et al. 2265 (UTC).  
**Status:** Uinta Basin endemic, restricted and rare; endangered (Ripley, E).  
**Distribution:** Uintah Co., Utah (Bry, UTC), and Rio Blanco Co., Colorado (NY).  

**Type:** Ca 17 miles southeast of Garrison along Utah Highway 21, Millard Co., Utah, 23 Jul 1965, Holmgren et al. 2247 (UTC).  
**Status:** Endemic, restricted and rare; threatened (Ripley, T).  
**Distribution:** Millard Co., Utah (Bry. UTC).  

**Status:** Local and common to abundant, neither threatened nor endangered.  
**Distribution:** Emery (Bry. UT; where rare) and Washington (where common) counties, Utah; widespread and common in Arizona, Nevada, California, and Baja California, Mexico.  

**Type:** Lake Blanche, Salt Lake Co., Utah, 15 Aug 1947, Holmgren et al. 7121 (UTC).  

---  

Eriogonum corymbosum Benth. in DC. var. corymbosum Eriogonum differs small, Utah, 1853, Creutzfeldt s.n. (NY).  
**Status:** Endemic, restricted and local; endangered (Ripley, E).  
**Distribution:** Carbon Co., Utah; known only from type locality.  

**Type:** Near Green River, Emery Co., Utah, 1 Oct 1853, Creutzfeldt s.n. (NY).  
**Status:** Endemic, local and restricted; neither endangered nor threatened.  
**Distribution:** Emery, Garfield, and Grand counties, Utah.  

This form of Eriogonum corymbosum differs from var. corymbosum in having small, usually crenulate leaves, smaller more compact stature, and compact inflorescences.  

**Type:** Gravelly, boulder-strewn, east-facing slope near the head of the canyon at milepost 26 south of Antimony along Utah Highway 22, Garfield Co., Utah, 4 Sep 1969, S. L. & S. L. Welsh 9389 (BRY).  
**Status:** Endemic, rare and local; endangered.  
**Distribution:** Garfield Co., Utah; known only from the type locality.  

This form of Eriogonum corymbosum differs from var. corymbosum in having elongated, entire leaves concentrated near the base of elongated flowering stems and open, spreading inflorescences.  

**Type:** Loose decomposed granite talus slopes on the west side of Bull Mtn., Henry Mts., Garfield Co., Utah, 14 Aug 1967, 8,300 feet, Holmgren & Reveal 3010 (UTC).  

---  

Eriogonum corymbosum Benth. in DC. var. corymbosum Eriogonum differs small, Utah, 1853, Creutzfeldt s.n. (NY).  
**Status:** Endemic, restricted and local; endangered (Ripley, E).  
**Distribution:** Garfield Co., Utah; known only from the type locality (Bry. NY, UTC).  

**Status:** Restricted and rare; possibly threatened.  
**Distribution:** Box Elder and Tooele counties, Utah; northeastern Nevada and southern Idaho (Reveal 1973a).  

**Type:** Ca 10 miles south of Bonanza along Utah Highway 45 south of the White River, 25 Jul 1965, Holmgren et al. 2265 (UTC).  
**Status:** Uinta Basin endemic, restricted and rare; endangered (Ripley, E).  
**Distribution:** Uintah Co., Utah (Bry, UTC), and Rio Blanco Co., Colorado (NY).  

**Type:** Ca 17 miles southeast of Garrison along Utah Highway 21, Millard Co., Utah, 23 Jul 1965, Holmgren et al. 2247 (UTC).  
**Status:** Endemic, restricted and rare; threatened (Ripley, T).  
**Distribution:** Millard Co., Utah (Bry. UTC).  

**Status:** Local and common to abundant, neither threatened nor endangered.  
**Distribution:** Emery (Bry. UT; where rare) and Washington (where common) counties, Utah; widespread and common in Arizona, Nevada, California, and Baja California, Mexico.  

**Type:** Lake Blanche, Salt Lake Co., Utah, 15 Aug 1947, Holmgren et al. 7121 (UTC).
Status: Endemic, disjunct and infrequent.

Distribution: Juab, Salt Lake, Utah, and Weber counties, Utah (bry, wsco, utc; Reveal 1973a).

_Type:_ Ca 13.5 miles east of Monticello, 13 Aug 1966, 6,800 feet, Holmgren & Reveal 3001 (UTC).

_Status:_ Endemic, restricted and rare; endangered (Ripley, E).

_Distribution:_ San Juan Co., Utah; known only from the type locality.

_Eriogonum hylophilum_ Reveal & Brother-son, Great Basin Nat. 27: 190. 1968.

_Type:_ Along Utah Highway 53 in Gate Canyon, 2.7 miles southwest of the summit of the Badlands Cliffs, Duchesne Co., Utah, 15 Aug 1966, 6,500 feet, Holmgren & Reveal 3017 (UTC).

_Status:_ Endemic, rare and restricted; endangered (Ripley, E).

_Eriogonum intermontanum_ Reveal, Ma- droño 19: 293, 1969.

_Type:_ Ca 1.5 miles south of the Uintah Co. line at the head of Middle Canyon of West Water Creek drainage in Roan Cliffs, Grand Co., Utah, 27 Jul 1965, 8,400 feet, Holmgren et al. 2278 (UTC).

_Status:_ Endemic, rare and local; endangered (Ripley, E).

_Distribution:_ Grand Co., Utah (bry, utc).

_Type:_ Along Utah Highway 15, 4.9 miles west of the east entrance to the park on Checkerboard Mesa, Zion N.P., Washington Co., Utah, 12 Aug 1972, Reveal & Reveal 2874 (us).

_Status:_ Endemic, restricted and rare; threatened (Ripley, T).

_Distribution:_ Kane and Washington counties, Utah (Reveal 1973a).

_Type:_ On low hills 5 miles east of Wellington, Carbon Co., Utah, 9 Sep 1967, Reveal & Davidse 957 (UTC).

_Status:_ Endemic, restricted and loc- al; threatened (Ripley, E).

_Distribution:_ Carbon Co., Utah (bry, us. utc).

_Type:_ Near the Green River, Emery Co., Utah, 1 Oct 1853, Creutzfeldt s.n. (ny).

_Status:_ Endemic, edaphically re- stricted but locally abundant and neither threatened nor endangered. Our plant is var. _leptocladon_.

_Distribution:_ Emery, Garfield, Grand, San Juan, and Wayne counties, Utah (bry, utc; Reveal 1966).

_Status:_ Local and rare; threatened.

_Distribution:_ San Juan Co., Utah (Harrison 12163 [bry]); southwestern Colorado, northeastern Arizona and ad- jacent New Mexico (Reveal 1968a).

_Eriogonum loganum_ A. Nels., Bot. Gaz. 54: 149, 1912.

_Type:_ Logan, Cache Co., Utah, 26 Jun 1909, Smith 1704 (rm).

_Status:_ Endemic, extremely restric- ted and rare; endangered (Ripley, E).

_Distribution:_ Cache Co., Utah (bry, utc).

_Type:_ Talus slopes and limestone outcrops south of Willard Peak. Box Elder Co., Utah, 31 Aug 1964, 9,500 feet, Reveal & Holmgren 665 (us).

_Status:_ Endemic, restricted and rare; threatened (Ripley, T).

_Distribution:_ Box Elder and Weber counties, Utah (bry, utc, wsco).

_Eriogonum natum_ Reveal, spec. nov.

A _Eriogono breviculae_ Nutt. differt foliis ellipticis, 2-2.5 (3) cm longis et (8) 10-13 (15) mm latis, lanatis, inflores- centis cymoso-umbellatis, floribus flavis, 2-2.5 (3) mm longis, glabris.

Spreading herbaceous perennials 1-3.5
GREAT BASIN NATURALIST Vol. 35, No. 4

GREAT BASIN NATURALIST Vol. 35, No. 4

Eriogonum natum belongs to the large species group typified by E. brevicaule and is seemingly most closely related to E. brevicaule var. cottamii (S. Stokes) Reveal, a narrowly restricted variant of the pinyon-juniper woodlands of north central Utah. The new species differs from var. cottamii in having longer and broader elliptical leaves, a longer but less branched inflorescence, and smaller flowers. The new species is restricted to the white alkaline beaches of Sevier Lake and is currently known for the two locations cited above.

Eriogonum natum is named to honor its discoverer. Mark L. Reveal (1961-).

STATUS: Endemic, rare and threatened.

DISTRIBUTION: Millard Co., Utah.

Eriogonum nummulaire M. E. Jones, Contr. W. Bot. 11. 13. 1903.

TYPE: Dutch Mtn., Tooele Co., Utah, 15 Jun 1900, M. E. Jones s.n. (pom).

STATUS: Endemic, rare and seemingly local.

DISTRIBUTION: Juab, Millard, and Tooele counties, Utah (Reveal 1973a).

TYPE: Near Joseph City, Sevier Co., Utah, 13 Jun 1898, M. E. Jones s.n. (pom).

STATUS: Endemic, restricted and local; threatened (Ripley, T).

DISTRIBUTION: Piute and Sevier counties, Utah (Reveal 1973a).

STATUS: Endemic, restricted and local.

DISTRIBUTION: Garfield, Iron, Kane, Sevier, and Washington counties, Utah (Reveal 1966; 1973a).

**Type:** Cedar Breaks N.M., Iron Co., Utah, 18 Jul 1930, *Goodman & Hitchcock* 1601 (CAS).

**Status:** Endemic, rare and local; threatened (Ripley, T).

**Distribution:** Iron Co., Utah (bry., us, utc).

**Type:** Foothills south of Pinto on the north slope of the Pine Valley Mts., 18 Aug 1973, *Atwood & Higgins* 5895 (US).

**Status:** Rare, in disjunct populations.

**Distribution:** Millard and Washington counties, Utah, and in Mohave Co., Arizona, and Lincoln Co., Nevada (Reveal 1974).

**Status:** Probably extirpated from Utah.

**Distribution:** “Utah” (*Palmer* s.n. [GH]); infrequent and widely scattered in northwestern Arizona, southern Nevada and southeastern California.

**Type:** Along the Island Park road, 10 miles east of Vernal along Brush Creek on steep hillsides on the ridges, Uintah Co., Utah, 15 Aug 1966, 5,200 feet, *Holmgren & Reveal* 3019 (UTC).

**Status:** Edaphically restricted; threatened (Ripley, T).

**Distribution:** Uintah Co., Utah, and adjacent northwestern Colorado (Reveal 1973a).

**Type:** Between Little Flat Top and Big Flat Top, San Rafael Desert, ca 10 miles southeast of Utah Highway 24, Emery Co., Utah, 14 Aug 1966, 5,500 feet, *Holmgren & Reveal* 3012 (UTC).

**Status:** Endemic, edaphically restricted and local; threatened (Ripley, T).

**Distribution:** Emery Co., Utah (bry., utc).

**Type:** Lower Valley of the Sevier River, Sevier Co., Utah, Jul 1874, *Parry* 245 (GH).

**Status:** Endemic and scattered in isolated populations, but neither threatened nor endangered.

**Distribution:** Beaver, Iron, Millard, Piute, Sanpete, and Sevier counties, Utah (Reveal 1973a).

**Type:** Sandstone cliffs near Kanab, Kane Co., Utah, 1872. *Thompson* s.n. (GH).

**Status:** Arizona strip endemic, restricted and rare; threatened (Ripley, T).

**Distribution:** Kane and Washington counties, Utah (bry., mady, utc), and Mohave Co., Arizona (bry., cas, us, utc).

**Type:** Ca 3 miles west of Virgin, Washington Co., Utah, 11 Aug 1966, 3,700 feet, *Holmgren & Reveal* 2991 (UTC).

**Status:** Endemic, edaphically restricted and threatened (Ripley, T).

**Distribution:** Washington Co., Utah (bry., utc).

**Type:** Sandstone ledges and rock-pavement on Red Plateau, southwest of Woodside, Emery Co., Utah, 13 Jun 1947, *Ripley & Barneby* 8678 (CAS).

**Status:** Restricted and very local in disjunct populations.

**Distribution:** Duchesne and Emery counties, Utah, and in Moffat Co., Colorado (gs).

**Type:** UTAH: Utah Co.: Along the Timpooneke Road, 1 mile northwest of Utah Highway 80, near Timpooneke Campground, east of Mt. Timpanogos,
associated with Quercus, Populus and Artemisia at about 7,600 feet, 10 Jul 1974, Reveal 3702. Holotype, US! Iso-
types, BRY, CAS, GH, MARY, MO, NY, OKL, UTC.

STATUS: Endemic, locally common, but neither threatened nor endangered.

DISTRIBUTION: Juab, Salt Lake, Sanpete, Tooele, Utah, and Wasatch counties, Utah.

This form of Eriogonum umbellatum has been confused with var. dichro-
cephalum Gandoger which has leaves pubescent at least on the lower surface.

STATUS: Uinta Basin endemic, restricted and local; threatened (Ripley, T).

DISTRIBUTION: Duchesne and Uintah counties, Utah, and Moffat Co., Colorado (Reveal 1973a).

TYPE: Zion N.P. along the Mt. Carmel highway in the canyon of Clear Creek, Washington Co., Utah, 8 Sep 1938, Eastwood & Howell 6344 (CAS).

STATUS: Endemic, rare and local; endangered (Ripley, E).

DISTRIBUTION: Kane and Washington counties, Utah (for var. zionis), with var. coccineum J. T. Howell restricted to northern Arizona.

TYPE: Ca 6 miles north of Escalante, Garfield Co., Utah, 17 Sep 1935, Cottam 6507 (UTC).

STATUS: Endemic; species of uncertain taxonomic status.

DISTRIBUTION: Garfield Co., Utah (BRY, UTC); known only from the type locality.

Polypodiaceae

STATUS: Rare and local; status uncertain within Utah as not collected since the 1930s (Flowers 1944).

Distribution: Washington Co., Utah; widespread in Eurasia, known only from three locations in the United States (Cronquist et al. 1972).

Asplenium resiliens Kunze, Linnaea 18: 331. 1844, based on A. parrvulum Martens & Galeotti, Mém. Foug. Mex. 60. 1842, not Hook.

STATUS: Local and rare; possibly threatened.

DISTRIBUTION: San Juan Co., Utah (Flowers 1965); widespread in North and South America.

STATUS: Rare and obscure; possibly endangered.

DISTRIBUTION: Daggett (Wieboldt 1460A [UTC]) and Grand (Maguire 1935) counties, Utah; circumboreal.

STATUS: Restricted and rare; possibly threatened.

DISTRIBUTION: Washington Co., Utah (Maxon 1917); Arizona and southern California (Flowers 1944; Cronquist et al. 1972).

Portulacaceae

Calyptridium monandrum Nutt. ex Torr. & Gray, Fl. N. Amer. 1: 198. 1838.

STATUS: Rare and restricted; possibly threatened.

DISTRIBUTION: Washington Co., Utah (BRY); also Arizona and California, and Baja California, Mexico.

STATUS: Rare and obscure; possibly threatened.

Primulaceae

TYPE: Beaver Co-op Ranch, at the head of the South Fork of the East Fork of the Sevier River, Garfield Co., Utah, in cold bogs, 7,000 feet. M. E. Jones 5312av (POM).

STATUS: Rare and possibly extirpated in the type area; threatened.
**Distribution:** Daggett and Garfield counties, Utah (Cosgriff 1968); widespread in northwestern North America (Welsh 1974b).

**Type:** Damp overhanging rock ledges and cracks. 5 miles up Logan Canyon, Cache Co., Utah, 19 Apr 1932, Maguire & Maguire 3650 (Mo).

**Status:** Endemic, rare and threatened (Ripley, T).

**Distribution:** Cache Co., Utah (UTC).

**Type:** Along the San Juan River near Bluff, San Juan Co., Utah, 25-29 Aug 1911, Rydberg 9882 (Ny).

**Status:** Restricted habitatwise, local and threatened (Ripley, T).

**Distribution:** Garfield (UT), Grand, Kane, San Juan, and Wayne counties, Utah, and in northern Arizona (Cosgriff 1968; McDougall 1973).

**Ranunculaceae**

**Type:** Near Bluff, San Juan Co., Utah, Jul 1894, Wetherill s.n. (CAS).

**Status:** Restricted habitatwise, local but not threatened nor endangered.

**Distribution:** Emery, Garfield, Grand, Kane, and San Juan counties, Utah (Bry); also in Arizona and Colorado.

**Type:** Meadow at springs just east of U.S. Highway 89 and 300 yards west of the Sevier River, 8.3 miles north of the principal intersection in Panguitch and about 1.5 miles south of the intersection with Utah Highway 20 leading to Parowan, Garfield Co., Utah, 29 Aug 1948, 6,400 feet, Benson 13420 (Pom).

**Status:** Endemic and presumed to be extinct (Ripley, PoEx).

**Distribution:** Garfield Co., Utah (Bry); known only from the type locality.

**Rosaceae**

**Status:** Rare and local, altitudinally restricted.

**Distribution:** Piute and Wayne counties, Utah (Bry); also from Colorado, North Dakota and Michigan, north to Yukon and Alaska; Asia (Welsh 1974b).

**Status:** Rare and threatened.

**Distribution:** Cache Co., Utah (Maguire 1937); widespread elsewhere.

*Crataegus succulenta* Schrader ex Link, Handbuc 2: 78. 1831.

**Status:** Local and rare, threatened.

**Distribution:** Utah Co., Utah (Bry, UTC; Barnes 1943); widespread to the east of Utah (Little 1953).

**Type:** Head of the Sevier River, probably in Garfield Co., Utah, 11 Sep 1894, 8,000 feet, M. E. Jones 6032 (Pom).

**Status:** Rare and local, possibly threatened.

**Distribution:** Garfield and Washington counties, Utah (Bry), and Nye Co., Nevada (Keck 1938b).

**Type:** On the summit of Bald Mountain, in Wasatch Range, above Alta, Salt Lake Co., Utah, Aug 1879, over 12,000 feet, M. E. Jones 1231 (GH).

**Status:** Endemic, rare and local.

**Distribution:** Salt Lake, Summit, and Utah counties, Utah (Keck 1938b).

*Rubus neomexicanus* A. Gray, Smithsonian Contr. Knowl. 5: 55. 1853.

**Status:** Local, rare and threatened.

**Distribution:** San Juan Co., Utah (Bry); New Mexico, Arizona, and northern Mexico.
Most of the known range of this species has been destroyed by Lake Powell.

**Rubiaceae**

*Galium multiflorum* Kellogg var. *watsonii* A. Gray, Syn. Fl. N. Amer. 1: 40. 1884.

**Type:** Wasatch Mts., Utah, 1869, *Watson 484* (gh).

**Status:** Endemic, neither threatened nor endangered.

**Distribution:** Box Elder, Cache, Davis, Tooele, and Utah counties, Utah (Dempster & Ehrendorfer 1965).

**Type:** Calf Springs Wash, San Rafael Swell, Emery Co., Utah, *Maguire 18137* (gh).

**Status:** Endemic, neither threatened nor endangered.

**Distribution:** Carbon and Emery counties, Utah.

**Rutaceae**

**Status:** Rare and possibly extirpated.

**Distribution:** Garfield and Kane counties, Utah; this subspecies also in Arizona and Colorado (Bailey 1962).

**Scrophulariaceae**

**Type:** Aquaris Plateau, 22 miles northwest-north of Escalante on the road to Bicknell, 0.5 mile north of Clayton Guard Station turnoff, Garfield Co., Utah. 11 Aug 1970, 9,600 feet, *Holmgren & Holmgren 4726* (ny).

**Status:** Endemic, rare and local; endangered (Ripley, E).

**Distribution:** Garfield Co., Utah; known only from the type area.

**Type:** Head of American Fork Can-

**Status:** Endemic, locally common but neither threatened nor endangered.

**Distribution:** Cache, Daggett, Davis, Duchesne, Salt Lake, Sanpete, Summit, Tooele, Utah, and Wasatch counties, Utah (Bry, Ut).

**Type:** Mountains north of Bullion Creek near Marysville, Piute Co., Utah, 1905, *Ryder & Carlton 7158* (ny).

**Status:** Endemic, rare and local; threatened (Ripley, T).

**Distribution:** Piute Co., Utah (ny, utc).

**Type:** In crevices of perpendicular or overhanging rocks along the San Juan River near Bluff, 25-29 Aug 1911, *Ryder 9883* (ny).

**Status:** Edaphically restricted, local and disjunct; not threatened nor endangered.

**Distribution:** Grand, Kane, and San Juan counties, Utah (Bry), and adjacent northern Arizona (Kearney & Peebles 1951).

**Type:** Ireland Ranch, head of Salina Canyon, Sevier Co., Utah. 15 Jun 1894, 2,400 m, M. E. Jones 5440 (us).

**Status:** Endemic, rare and local; threatened (Ripley, T).

**Distribution:** Iron (ut), Sevier, and Utah counties, Utah (Bry; Keck 1937a).

**Status:** Restricted, rare and threatened (Ripley, T).
Distribution: Daggett Co., Utah (NY, US, UTC) and adjacent Sweetwater Co., Wyoming (Keck 1937a).

Type: South end of Horse Mt., ca 10 miles south-southwest of Canaan Peak, Kane Co., Utah, 14 Jun 1975, S. L. & S. L. Welsh 12820 (BRY).
Status: Endemic, local and threatened.
Distribution: Garfield and Kane counties, Utah (Bry, NY).

Type: Red Canyon, Garfield Co., Utah, 20 Jun 1933, Eastwood & Howell 783 (CAS).
Status: Endemic, restricted and rare; possibly threatened.
Distribution: Garfield Co., Utah (Bry).

Penstemon caespitosus Nutt. var. suffruticosus A. Gray, Syn. Fl. N. Amer. 2: 270. 1878.
Type: Near Beaver, Beaver Co., Utah, 1877, Palmer s.n. (GH).
Status: Endemic, restricted and local; threatened (Ripley, T).
Distribution: Beaver, Garfield and Piute counties, Utah (Keck 1937a).

Status: Endemic, restricted and threatened (Ripley, T).
Distribution: Cache Co., Utah (Bry, UTC, WSCO).

Type: Tunnel Springs, northwest corner of Desert Range Experiment Station boundary, about 10 miles east of Garrison, Millard Co., Utah, 28 Jun 1933, 1,675 meters, Cottam 5635 (DS).
Status: Endemic, restricted and rare; endangered (Ripley, E).
Distribution: Beaver and Millard counties, Utah (BRY, NY, US, UTC).

Type: Crevices in travertine rock, "Hot Pots," near Midway, Wasatch Co., Utah, 6 Jul 1905, Carleton & Garrett 6697 (NY).
Status: Endemic, restricted and possibly extinct.
Distribution: Duchesne (UT) and Wasatch counties, Utah.

Type: Talus slope on the west side of Green River, south of the mouth of Sand Wash, Uintah Co., Utah, 27 May 1933, Graham 7883 (CM).
Status: Endemic, rare, restricted and endangered (Ripley, E).
Distribution: Uintah Co., Utah (Bry, UTC; Keck 1938a).

Type: Cottonwood Canyon, Wasatch Mts., Salt Lake Co., Utah, 1869, 9,000-10,000 feet, Watson 781 (GH).
Status: Endemic, local and possibly threatened.
Distribution: Cache, Juab, Salt Lake, Utah, and Weber counties, Utah (Bry, UT).

Type: Springdale, Washington Co., Utah, 16 May 1894, 1,600 meters, M. E. Jones 5249am (POM).
Status: Endemic, rare and restricted; possibly threatened.
Distribution: Beaver and Washington counties, Utah (Keck 1945).

Status: Endemic, rare and obscure; taxonomic status questionable.
Distribution: Washington Co., Utah; known only from the type locality.

Type: Red sand at Springdale, Washington Co., Utah, 17 May 1894, 1,200 meters, M. E. Jones 5250, in part (US).  
Status: Endemic, restricted and local.

DISTRIBUTION: Kane, Garfield, and Washington counties, Utah (BRY, UTC).

Type: Mammoth Creek, Garfield Co., Utah, 10 Sep 1894, 2,400 meters, M. E. Jones 6026b (US).

Status: Endemic, restricted and local; threatened (Ripley, T).

DISTRIBUTION: Garfield, Iron, Kane, and Washington counties, Utah (BRY).

Type: Abajo Mts., ca 8 miles west of Blanding, near the “Bear’s Ears,” San Juan Co., Utah. 9 Jun 1938, 2,400 meters, C. L. Porter 1801 (RM).

Status: Endemic, locally common and not threatened.

DISTRIBUTION: San Juan Co., Utah (BRY).

Type: Diehl’s Grove, Wasatch Mts., possibly Utah Co., Utah. 1 Aug 1884, Leonard s.n. (NY).

Status: Endemic, locally common and not threatened nor endangered.

Type: Beaver, Beaver Co., Utah. Palmer 376 (NY).

Status: Endemic, restricted but locally common.

DISTRIBUTION: Beaver, Millard, and Piute counties, Utah (BRY).

Type: Desert Range Experiment Station, about 10 miles east of Garrison, Millard Co., Utah. 13 May 1939, 1,675 meters, Plummer 7313 (US).
