

INFORMATION FOR AUTHORS

The *Western North American Naturalist* welcomes previously unpublished manuscripts pertaining to the biological natural history of western North America, including western Canada and all of Mexico. Preference will be given to concise manuscripts of up to 12,000 words. Longer manuscripts will be considered for the monograph series.

SUBMIT MANUSCRIPTS through the web interface at www.editorialmanager.com/wnan (please contact the editorial office at wnan@byu.edu or 801-422-6688 for any needed assistance). Authors will be expected to describe the extent to which data, text, or illustrations have been used in other papers or books that are published, in press, submitted, or soon to be submitted elsewhere. These are not considered prior publications, and preprints are allowable with identification of the URL.

MANUSCRIPT PREPARATION. In general, the *Western North American Naturalist* follows recommendations in *Scientific Style and Format: The CSE Manual for Authors, Editors, and Publishers*, 8th edition (University of Chicago Press; www.councilscienceeditors.org). However, we do differ in our treatment of entries in literature cited and other minor stylistic matters. Authors should consult recent issues of the journal for formatting examples.

TYPE AND DOUBLE SPACE all materials, including literature cited, tables, and figure captions. Use a standard page size and margin allowance.

SUBMIT ELECTRONIC FILES. Please follow the online instructions for file submission. A PDF file will be compiled automatically and made available for your approval before the submission is finalized.

TITLE PAGE includes an informative title no longer than 20 words; names, affiliations, and email addresses of all authors; a running head of fewer than 40 letters; and notes to indicate the corresponding author and changes of address. Inclusion of ORCID identifiers is encouraged but not required (register at orcid.org).

ABSTRACT states briefly the purpose, methods, results, and conclusions of the research. Authors are welcome to provide a Spanish translation of their abstract for a reduction of total page charges by \$40 for notes and \$65 for articles.

TEXT has centered main headings printed in all capital letters; 2nd-level headings are centered in upper- and lowercase letters; 3rd-level headings begin paragraphs.

VOUCHER SPECIMENS. Authors are encouraged to designate, properly prepare, label, and deposit high-quality voucher specimens and cultures documenting their research in an established permanent collection, and to cite the repository in publication.

REFERENCES IN THE TEXT are cited by author and date: e.g., Martin (1998) or (Martin 1998). Multiple

citations should be separated by commas and listed in chronological order. Use "et al." after name of first author for citations having more than 2 authors.

ACKNOWLEDGMENTS, under a main heading, include special publication numbers, grant or contract numbers, or protocol numbers when appropriate.

LITERATURE CITED, also under a centered main heading, lists references alphabetically in the following formats (journal article, book, edited work):

KONDOLE, G.M. 1997. Hungry water: effects of dams and gravel mining on river channels. *Environmental Management* 21:533–551.

BRADY, N.C. 1990. *The nature and properties of soils*. 10th edition. Macmillan, New York, NY.

TOKESHI, M. 1995. Life cycles and population dynamics. Pages 225–268 in P. Armitage, P.S. Cranston, and L.C.V. Pinder, editors, *The Chironomidae: biology and ecology of non-biting midges*. Chapman and Hall, London, England.

TABLES are prepared as separate word processing files. Authors should consider that tables will be typeset to fit the width of either a single column (6.7 cm) or a page (14.0 cm) in the journal. Wider tables will be rotated 90° and can have a maximum width of 21 cm. Typically, lowercase letters are used to indicate footnotes.

FIGURES are prepared as separate files in the following acceptable formats: EPS, TIF, JPEG, or PDF. Lettering on figures should be large enough to withstand reduction to 1- or 2-column width. Resolution should be at least 300 dpi for photographs and up to 1200 dpi for black-and-white line art. Please note that nonphotographic materials (e.g., line art, some maps, graphs, charts) exported to JPC format often result in poor-quality printed figures.

SUPPLEMENTARY MATERIAL. Supporting materials that cannot be included, and which are not essential for inclusion, in the full text may be uploaded with the manuscript submission files. Examples include audio/video files, spreadsheets, programming files, figures, tables, and so forth. The files will be hosted alongside the published article at <http://scholarsarchive.byu.edu/wnan> and with other electronic distributors (e.g., BioOne, ProQuest, EBSCO, etc.) as permissible.

NOTES. If the manuscript would be more appropriate as a short communication or note, follow the above instructions but do not include section headings.

PAGE CHARGES. \$55 per printed page will be assessed for published articles and notes (\$40 per page if any one of the authors is an individual subscriber at the time of publication). Color figures can be accommodated at no extra charge. A flat fee of \$40 will be assessed for processing of supplementary materials. A press-quality PDF file of the published article will be provided to the corresponding author for distribution.

Western North American Naturalist

Volume 78 No. 2

August 2018

ISSN 1527-0904

CONTENTS

Articles

- Dune habitat trends of an endangered species, *Penstemon haydenii* Wats. (blowout penstemon), in Carbon County, Wyoming . . . Bonnie Heidel, Samuel E. Cox, and Frank C. Blomquist **119**
- American pika (*Ochotona princeps*) population survival in winters with low or no snowpack Andrew T. Smith and Constance I. Millar **126**
- Conspecific pollen on honey bees and a chrysomelid beetle species visiting female flowers on *Nolina microcarpa* (Asparagaceae) William D. Wiesenborn **133**
- Seasonal spatial ecology of mountain lions (*Puma concolor*) in the central Sierra Nevada Justin A. Dellinger, Eric R. Loft, Ronald C. Bertram, Donald L. Neal, Marc W. Kenyon, and Steven G. Torres **143**
- Density and pond habitat affect survival and growth rates in larval Columbia spotted frogs (*Rana luteiventris*). Sidney A. Patchett, Allystair D. Jones, and Mark C. Belk **157**
- Bat hibernacula in caves of southern Idaho: implications for monitoring and management Jericho C. Whiting, Bill Doering, Gary Wright, Devin K. Englestead, Justin A. Frye, and Todd Stefanic **165**
- Roost characteristics and clustering behavior of western red bats (*Lasiurus blossevillii*) in southwestern New Mexico Brett R. Andersen and Keith Geluso **174**
- La Sal daisy, *Erigeron mancus*, density and associated species from treeline ecotone and alpine habitats James F. Fowler, Steve Overby, and Barb Smith **184**
- Interaction between seed detectability and seed preference affects harvest rates of granivorous rodents William S. Longland and Lindsay A. Dimitri **195**

Notes

- Lacustrine spawning by mountain suckers (*Catostomus platyrhynchus*) on Boulder Mountain, Utah. Martin C. Arostegui **204**
- Kleptoparasitism of harvester ants by the giant kangaroo rat (*Dipodomys ingens*) in the Carrizo Plain, California Matthew Polvorosa Kline, Jeff A. Alvarez, and Nicole Parizeau **208**
- New records of tricolored bats (*Perimyotis subflavus*) in Colorado, with first evidence of reproduction Rick A. Adams, Burton Stoner, Donna Nespoli, and Sarah M. Bexell **212**
- First description of a Bald Eagle (*Haliaeetus leucocephalus*) actively depredating an adult Sandhill Crane (*Antigone canadensis*). Andrew J. Caven, Joshua D. Wiese, William R. Wallauer, and Kristin J. Mosher **216**
- Cougar dispersal and natal homing in a desert environment David M. Choate, Kathleen M. Longshore, and Daniel B. Thompson **221**
- Relative abundance of pond snails in Turnbull National Wildlife Refuge, Washington, and the spread of an invasive snail Michele D. Larson, Christina M. Torrieri, and A. Ross Black **236**
- New state record and potential distribution of the snake *Sibon nebulatus* (Dipsadidae) from Mexico Luis M. Badillo-Saldaña, José Daniel Lara-Tufiño, Aurelio Ramírez-Bautista, and Jonathan A. Campbell **242**
