Length is the measurement of how long something is. Distance tells us how far apart things are. Most countries use the metric system (centimeter, meter), but the United States uses the standard system (inch, foot). Rulers are used to measure things, but you can also use your hand or a book!

Measure It! is a very interactive book that will engage children in learning. There are many activities in the book such as finding objects that are an inch long and using the book to measure a table. There are also questions to answer about length and distance and what kind of measurement to use. Crisp modern graphics are included along with photographs, making it easier for children to learn about measurement.
