Themes and Trends of *Journal of Family and Economic Issues*: A Review of Twenty Years (1988–2007)

Jeffrey Dew

Published online: 21 May 2008
© Springer Science+Business Media, LLC 2008

Abstract This review article examines the progress and impact of the *Journal of Family and Economic Issues* (JFEI) between 1988–2007. Over the past 20 years, *JFEI* has become a major journal publishing articles on the relationship between families and economic systems. *JFEI* contributed to both the economic and family studies disciplines by publishing articles that explore the interface of these two disciplines. Between 1988 and 2007, *JFEI* published articles on a variety of themes not often found in other economic or family studies journals such as family resource management, consumer attitudes and behaviors, and economic issues and family relationships. Other unique characteristics of *JFEI* include many collaborative multidisciplinary studies and many studies analyzing international or cross-cultural samples.

Keywords Consumer science · Family and economic issues · Journal review

In 1988, the editor and board of the journal *Lifestyles: A Journal of Changing Patterns* changed the focus of the journal and renamed it *Lifestyles: Family and Economic Issues*. In the vision of Charles “Chuck” Hennon, then the editor, the journal would publish “articles having as a central focus the interface between the family and economic systems” (Hennon 1988, 3). To more strongly emphasize the focus of the journal, the title became the *Journal of Family and Economic Issues* (*JFEI*) in 1992.

Dr. Hennon’s and the editorial board’s decision to shift the focus of the journal has proved quite prescient; during the two-decades since the change in focus in 1988, *JFEI* has grown substantially. A review in a separate journal showed that by the end of the 1990s, *JFEI* had become the top outlet of scholarship on consumer science research and published 62% more articles on consumer science research than the next-closest journal (Reynolds and Abdel-g hany 2001). Consequently, in only 10 years, *JFEI* managed to become a top

consumer science research journal by focusing on “the interface between the family and economic systems” (Hennon 1988, 3).

Since that review in 2001, *JFEI* has continued to grow. In 2003, the journal increased the number of pages in the volume by about 7% (from about 380 to 405 pages) to accommodate the increased number of high-quality manuscript submissions. In 2004 and 2005, the number of pages increased by more than a third of 2003 levels to about 500 pages per volume. Finally, the 2006 and 2007 volumes had a 27% increase over 2005 levels to roughly 700 pages per volume. The increase in the quantity of *JFEI* articles has not decreased their quality, however. The average acceptance rate between 2000 and 2005 is 32% (Xiao 2006). Thus, *JFEI* has grown in stature while maintaining the quality of the scholarship in its articles and is now a major outlet of research examining the relationship between family and economic issues.

Beyond the sheer number of publications, however, how has *JFEI* impacted the interdisciplinary field of family and economic research over the past 20 years? This article addresses this question. First, the method of the review is discussed. Second, *JFEI*'s characteristics are considered, including research themes and the multidisciplinary and international/cross-cultural nature of *JFEI*, and notes how those characteristics contribute to family and economic research literature. In addition, this article reviews *JFEI* citation trends. Finally, an annotated bibliography is included in the appendix. It lists all *JFEI* articles published in 1988–2007 (excluding book reviews) categorized by the main theme.

Method

I examined every article published in *JFEI* between 1988 and 2007, excluding editorial remarks and book reviews. Thus, I reviewed a total of 420 articles. I read the abstracts and key words of each article to classify the studies' theme. In some cases I had to read substantial amounts of the study if the theme was not readily apparent. I did not have any preconception of possible classification themes prior to reviewing the articles. Rather, as articles began to coalesce into meaningful groups during the review, I named these groups. Some articles fit into more than one theme. In these cases I attempted to select the theme that the author(s) focused on the most. At the end of the review I assessed the themes, combined some that were closely related (e.g., division of labor, gender roles, and women's labor force participation), and classified articles that had been in a “miscellaneous” category.

To quantify multidisciplinary authorship, authors' departmental or institute affiliation was noted for each article. All articles with more than one author were then evaluated. If an article had more than one author and the authors had different departmental affiliations, the article was considered to have multidisciplinary authorship. Thus, for example, if a psychologist and sociologist co-authored a paper it was counted as multidisciplinary. If, however, a professor from a family and consumer sciences department coauthored a paper with a professor from a consumer studies department, the paper was not considered multidisciplinary.

To be considered international or cross-cultural, a study had to meet one of two conditions. The paper either had to have a non-U.S. sample, or have a U.S. sample with a substantial focus on race/ethnic minority individuals within the sample.

Finally, citation trends were assessed by using the citation counts of the articles in the online database scholar.google.com in October of 2007. I chose the scholar.google.com database because it does not omit some journals like other citation databases do, and

because it is a resource available to all scholars rather than being exclusive. To obtain the citation rates, I first located each article on scholar.google.com. I then noted the number of citations for each article and whether each citation was outside or within *JFEI*. Then I averaged the number of citations in each volume. Because journal citations in the social sciences usually take time to accumulate, only the 1988–2004 citation rates were evaluated.

Impact on the Field of Family and Economic Studies

Characteristics of *JFEI*

JFEI Themes

The *JFEI* articles produced 15 themes. Ranging from Caregiving to Family Policy and from Consumer Attitudes and Behaviors to Employment and Work-Family Issues, these themes captured a wide range of topics related to the contact-points of family and economic issues (see Table 1). Perhaps not surprisingly, the themes of *JFEI* articles changed over time as different aspects of the family/economic-systems nexus have become more or less salient in society. For example, articles on work-family issues have steadily increased over-time, while articles on rural families have declined (Table 1).

Beyond the breadth of themes, *JFEI* articles covered many of them in depth. Ten of the 15 themes averaged one or more article per year. Given the focus of the journal, it is perhaps unsurprising that it published over 50 articles on family resource management between 1988 and 2007. However, the journal also published 40 articles on the division of

Table 1 Themes of articles in the *Journal of Family and Economic Issues*

	Articles in 1988–1992	Articles in 1993–1997	Articles in 1998–2002	Articles in 2003–2007	Total
Caregiving	1	5	9	8	23
Consumer attitudes and behaviors	3	8	3	9	23
Contraception, reproduction, sexual behavior	6	3	2	3	14
Division of labor, gender roles, women's labor force participation	14	5	9	12	40
Economic issues and family relationships	12	5	2	19	38
Employment and work-family issues	2	5	13	19	39
Family-owned businesses, home based employment	12	3	8	6	29
Family policy	5	15	5	8	33
Family resource management	14	6	12	20	52
Health and health services	4	5	3	5	17
Housing	5	5	2	1	13
Intergenerational or interhousehold exchanges	3	3	5	4	15
Poverty, public assistance	1	5	6	15	27
Rural families	8	6	0	1	15
Time use	12	11	1	4	28

labor, gender roles, or women's labor force participation during that time. Also notable were themes that rarely get play in other family journals such as family-owned businesses and at-home employment (29 articles) and the relationship between economic issues and family relationships (38 articles).

One unique aspect of *JFEI* was that often an entire issue focused on a specific theme. *JFEI* averaged about one special issue per year. Like the themes, these topics of the special issues were diverse—from time use, to family-owned businesses, to risk taking, for example. Guest editors chaired these special issues; their unique perspective on a topic influenced the character of the issue. Although other journals also have thematic issues and guest editors from time to time, *JFEI* frequently published special issues to address gaps in the literature regarding family and economic issues.

Multidisciplinary Authorship

Similar to the number of different themes, *JFEI* authors represented many disciplines. Beyond consumer economics and family studies, *JFEI* authors' departmental affiliations ranged from psychology to political science and from nutrition to sociology. Further, *JFEI* has also welcomed authors that were not in academic settings; this practice has diversified the manuscripts submitted. Although less common, manuscripts from authors at non-academic research centers, think tanks, and even large multinational entities (e.g., IBM, the World Bank) have enriched *JFEI* and helped broaden the examination of the relationship between economic and family issues.

Not only did *JFEI* publish articles from many disciplines, but *JFEI* authors often collaborated with individuals outside their discipline. For example, from 1988 to 2007, 57% of multi-author papers were written by collaborators in differing disciplines. In fact, the percent of multi-author papers that had multidisciplinary authorship was 50% or more in 14 of the 20 years (see Fig. 1). The percent of multidisciplinary authored papers never dropped below 40%. Publishing multidisciplinary studies is clearly one of *JFEI*'s strengths.

Fig. 1 Multidisciplinary authorship in the *Journal of Family and Economic Issues*

International/Cross-cultural Studies

The final unique characteristic of *JFEI* articles is the emphasis on international and cross-cultural studies. *JFEI* averaged slightly over 5 international/cross-cultural articles per year between 1988 and 2007. However, the majority of international and cross-cultural articles have been published since 1996 with many published in recent years (see Fig. 2).

Like some of the themes, many of the international or cross-cultural articles resulted from relevant social trends. Often, for example, international articles were published in special issues focusing on countries that experienced rapid economic change such as China and Poland. The cross-cultural articles are timely as well; many of them focus on the relationship between family and economic issues for Hispanic-Americans—now the U.S.'s second largest racial/ethnic group and one of the fastest growing. As noted below, publishing international and cross-cultural studies helps scholars understand the complexity of the economics/family relationship.

Enhancing Scholarship

These three characteristics of *JFEI* articles—breadth and depth of themes, multidisciplinary authorship, and international/cross-cultural studies—have positively influenced research on the relationship between economic issues and families. First, these characteristics of *JFEI* have provided an outlet for quality manuscripts that successfully bridge the gap between the two separate literatures of economics and family studies. For example, in a 25 year period, two well-known family-studies journals published only three articles related to family resource management (Israelsen and Hatch 2005). However, scholars

Fig. 2 International/Cross-cultural articles in the *Journal of Family and Economic Issues*

have continued to call for more attention to the relationship between family resource management and family life (Daly 2003; Zelizer 1994). *JFEI* filled this gap and published over 50 articles in family resource management and an additional 38 articles on how economic issues influence family relations.

By publishing articles with many different family-economic themes and multidisciplinary collaborators, *JFEI* also managed to capture the complexity of the relationship between family and economic issues. As noted above, 57% of multi-author papers were written by collaborators who crossed disciplinary lines. Although the interface between economics and families encompasses aspects of economics, consumer finance, and family studies, multidisciplinary authorship helps to better examine this interface. When scholars from multiple disciplines collaborate, they bring different perspectives to the same research problem and help each other overcome any disciplinary “blind spots.”

For example, economists and sociologists are not the only types of researchers needed to help understand work-family issues. Understanding such a complex relationship also necessitates the insights of psychologists, human resource specialists, and policy experts. Further, work-family issues do not just involve themes of economics, time use, and family relations. Rather, ideas about gender, care giving, and family resource management are also relevant. As an example of multidisciplinary authorship, an economist, a psychologist, and a human resource specialist collaborated to analyze how workers’ perceptions of family-friendly policies differed across types of employment (Anderson et al. 2002). Because these three authors came from different backgrounds, they were able to synthesize three distinct areas related to their respective fields (e.g., perceptions—psychology, work-family policy—human resources, corporate practices—economics) and produce insights about work-family issues facing university employees.

Finally, by publishing articles focusing on international and cross-cultural populations, *JFEI* advances understanding about the family-economic interface. For example, as noted above, many of the international publications focused on countries experiencing rapid economic change. Large economic shifts in countries provide case-studies for how families and macro-economic systems relate. These case-studies may refute or support various ideas on how families relate to economic systems leading to theoretic refinement. Further, international and cross-cultural studies provide insight as to how much of the relationship between families and economic issues are culturally determined. That is, to some extent the relationship between family and economic issues varies across cultures. For example, a recent study analyzed plans for future care among Latino and Anglo individuals (Delgadillo et al. 2004). By focusing on cross-cultural comparison, these scholars were able to demonstrate that older Latino individuals may lack knowledge about elder-care options in the U.S. This finding has practical implications, especially given the growing Hispanic-American population in the U.S.

Citation Trends

Figure 3 shows the average citation trends of the articles in each volume from 1988 to 2007. The trend generally goes up from an average of about two citations per article in 1988 and 1989 to over six citations per article in 2000 and 2002. The upward trend became a downtrend in 2003 and 2004, however.

Fig. 3 Citation rates of the *Journal of Family and Economic Issues*

Another important citation indicator or *JFEI*'s impact is average out-of-journal citation percentages. Figure 3 shows the trend for average out-of-journal citations. Not surprisingly, this trend tracks the overall average citation trend fairly closely. Some years had higher out-of-journal citations rates while other years had lower rates. For the period of 1988–2004, an average of 79% of citations of *JFEI* articles were made in journals other than *JFEI*.

The top 21 most cited papers in *JFEI* in 1988–2007 are presented in Table 2. Like *JFEI* studies in general, these papers tackled many different subjects; they were found in eight of the fifteen themes. Interestingly, though, thirteen of these top cited papers were from the categories of caregiving, employment and work-family issues, and family owned businesses. Multidisciplinary teams authored about half of the multi-authored papers in this highly cited group of studies.

Conclusion

JFEI has grown substantially in the 20 years since its predecessor adopted a focus on the association between families and economic issues. Most notably, *JFEI* has impacted research by providing an outlet where quality manuscripts on this relationship are published. The breadth and depth of the focus of the articles published on family/economic issues in *JFEI* is substantial. This is important because relatively few family studies journals publish many articles on family and economic issues. Scholars continue to cite *JFEI* articles both in *JFEI* and outside the journal. As important social economic issues change and as families respond (e.g., the impending retirement of millions of baby boomers), it is hoped that scholars will continue to publish their work in *JFEI*.
