Where Do Rivers Go, Momma?

When a young girl and her mother take a nature walk, the girl begins asking questions about the wonders of rivers, rocks, and other topics relating to earth science. The mother teaches her young daughter of how rainbows are formed, how clouds produce rain, how erosion takes place, and so much more.

Author, Catherine Weyerhaeuser, doesn't just include non-fiction topics in her book, but rather explains the scientific processes and brings the story to life. She goes in depth with each topic and yet keeps it simple enough for an elementary reader to understand and follow along. The detailed pictures compliment each description, allowing its reader the chance to fully learn the water cycle and other related topics. The central theme details the importance of being environmentally conscious so that plants, animals, and human life can continue to flourish. This well-crafted picture book would be a wonderful addition to any classroom library.
