Book Review

Zoom in on: Tiger Sharks

Tiger sharks are sharks with markings that look like tiger stripes. The younger the tiger shark, the darker the stripes will be. They are most often found near coasts. They are fierce predators, eating almost anything! Baby tiger sharks are called pups and can swim right after they're born. Comparisons between tiger sharks and things children would be familiar with are also made in this book.

Like most non-fiction books, Zoom in on: Tiger Sharks includes a table of contents, a glossary, an index, page numbers, and easy-to-find page headings. Beginning readers will benefit from the glossary, which includes words such as coast, crustaceans, marking, predator, and pup. This book would be especially appropriate for children in first through third grade. The pages are filled with clear photographs of sharks. This book is perfect for a read-aloud or for children to navigate on their own to find information and fun facts.
