Beverly Jones

### Rating

Excellent

### Level

Primary

Fall is considered a favorite season by many. The leaves are changing and revealing their beautiful colors. The air is turning cooler and the days are getting shorter. The temperature in fall is cooler than summer, but warmer than winter. However, fall weather is not the same all over the world. Different places may have a more mild fall compared to other places. No matter what the weather, fall remains a fun time of spectacular changes.

This book is an excellent resource for the classroom. Young students will learn about the types of weather changes that occur during the fall in a fun and interesting way. The colorful illustrations remind readers of the magic and beauty of fall. This book also inspires children to learn and compare different locations and their associated weather patterns. The questions located at the end of each chapter are helpful for critical thinking skills and communication skills. Fall Weather Fun brings excitement to education!
