punctuation of the elytra serve to separate it from Col. Casey's *duplicatus* and Horn's *armatus* with which it is closely related. This species was found associated with ants. In February, 1924, I collected specimens of *regularis* Horn at Saint George, Washington County, Utah in the nests of ants of the genus Aphaenogaster.

**Some Corrections in Hesperotettix**

Since the publication of my paper on "The Genus Hesperotettix in Utah" (Great Basin Naturalist, Vol. III, No. 1, 1942) I have submitted all my specimens of *Hesperotettix pacificus* Scudder to Morgan Hebard for determination and he has determined them to be *Hesperotettix viridis terminus* Hebard. It is a serious oversight that I did not submit my material for determination before publication. I really thought I had done so, but this particular species had escaped. The discussion in the paper referred to, which comes under the heading *Hesperotettix pacificus* Scudder, should really be headed *Hesperotettix viridis terminus* Hebard. The synonymy for *pacificus* should, of course, be omitted.

The spelling for *H. viridis terminus* Hebard is erroneous in the paper. It should be *t-e-r-m-i-u-s* and not *t-e-r-i-n-i-u-s*.—W. W. Henderson.
