ILEX RUSHFORTHII, A NEW NAME

James L. Reveal

In a review of the fossil flora of the Dakota Sandstone Formation near Westwater, Grand County, Utah, Rushforth (1971) described a new fossil species of *Ilex* (Aquifoliaceae) as *I. serrata*. Unfortunately, this name is already occupied and a new name must be proposed:

*Ilex serrata* Thunb. is a variable, much-branched dioecious shrub that is commonly found in much of Japan and is frequently cultivated in the United States.
