Jump on the Magic School Bus and come explore insects! Besides seeing beetles, butterflies, and bees up close and personal, you’ll fly with crickets, mosquitoes, and dragonflies, crawl around with ants and cockroaches, and discover the remarkable defensive tactics that help insects stay alive. The amount of bugs and details included in this book is very impressive, as every page highlights several insects at once.

Like other books in The Magic School Bus Presents series, this educational book uses all the well-known Magic School Bus characters to present a wide range of interesting information in a very appealing format. The book has a consistent color scheme and layout, which includes on every page a title, the main commentary, a “Frizzle Fact,” a short book-report summary, and several fascinating photographs with additional fun facts, all of which is written in very clear and understandable language. The final pages also include some more interesting facts and a helpful “Words to Know” page. This series would be an excellent addition to a classroom library and also a great educational tool to use at home.
